

VOYAGER™

Powerful Endpoint Management

Manage your connected endpoints and connectivity all from ONE platform.

Deploy

Connect

Control

Why VOYAGER™ for your endpoint management?

VOYAGER provides both connectivity and endpoint management. Gain full control over your wireless devices for faster deployment, easier troubleshooting, and simplified connectivity management.

Platform Features

Live Dashboard

Get a real-time, intelligent view of all your connected IoT devices in a user-friendly layout. View monthly data usage, top data users and estimated charges for SIM subscribers.

Connectivity Management

Manage your wireless data connections and SIM card subscriptions. Label connections for easy identification, run reports and troubleshoot all from one platform.

Device Management

View each connected endpoint's current and historic connection status, useful device info, and remotely reboot from one central dashboard.

Data Usage Metrics

Utilize metrics to optimize your data plans based on historical, real-time, and anticipated data usage.

Transparent Billing

Accurate and simple reporting allows better downstream billing and cost management across deployments.

Customization & Integration

A full API suite and our experienced in-house team of IoT developers can help take your custom IoT deployment from concept to market.
