

CloseOut

Your

SAFE BET

ON EXCELLENCE

in Fieldwork

We get it. You are having troubles with completing closeout packages on time.

Not anymore. CloseOut is a real-time quality control solution for field operations in the telecommunications industry that utilises photos, videos and checklists provided from field teams in one easy-to-use platform. Everything you need to get the work on your construction sites done on time. All in one place.

No missing documentation. No additional fixes on sites. As-built documentation at your fingertips.

What CloseOut does?

Quality standards change over time as technology evolves. They might even differ from site to site on the same project. And there is no enough time to properly educate field crew members about specific requirements.

CloseOut enables you to translate your project / construction site requirements into a systematic workflow structure with all necessary information for each segment of the field work. It enhances online collaboration, gives you the opportunity to perform quality checks, health and safety compliance checks in real-time, and to oversee your operations around the globe from a remote location.

Perform efficient daily health and safety compliance checks for every member of field teams from a remote location. Increase efficiency of your field operations, and complete projects faster while eliminating the need for site revisits.

CloseOut features

- Real-time quality inspection from a remote location
- Health and safety compliance checks for field crews
- Automatically generated as-built documentation for closeout packages
- Workforce management and time tracking for every employee in the field
- And many other features that can enhance the efficiency of field operations

Are you ready to improve efficiency of your field operations?
