MANAGEMENT SYSTEM

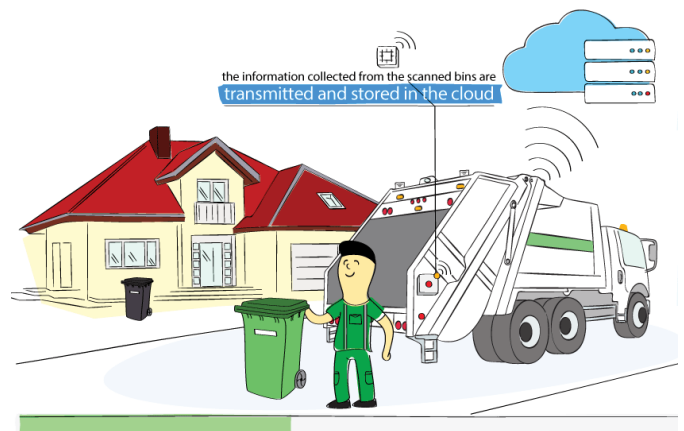

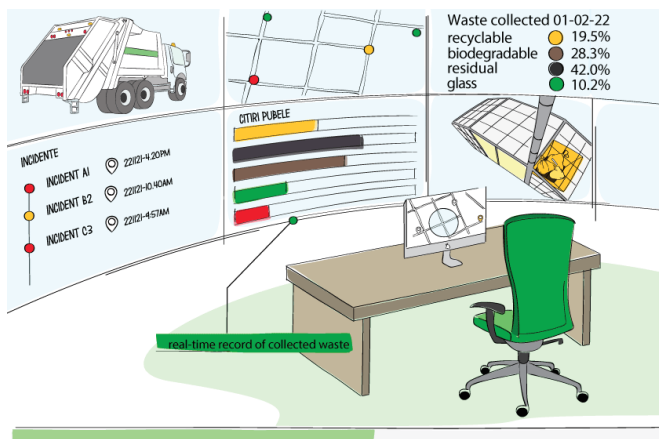

The solutions offered by CargoTrack allow real-time vehicle monitoring and analysis of all important parameters of the vehicle, in order to increase productivity.

less waste -> more future

Collector is a CargoTrack solution dedicated to waste management and is based on the "pay as you throw" principle, which refers to the fact that the citizen is charged according to the amount of waste generated and thrown away.

Authorities who are aware of the alarming amount of waste generated from year to year, are looking to implement a solution that makes waste management smarter in cities and beyond.

Collector is a complete hardware and software solution that any smart city needs that allows you to create a traceability of waste and billing according to the principle "pay as you throw". Artificial intelligence and machine learning algorithms automate processes by reducing the number of users required to administer the system.

The solution can be adapted according to the particularities of each sanitation company or authority that wants a better control over the waste generated. In other words, Collector is the smart city solution for waste management in the most beneficial way.

The Smart Collector solution is based on the following elements:

Trash bins / containers / bags equipped with RFID identification element.

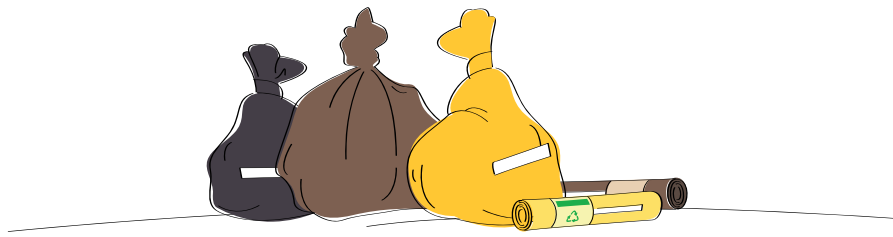

Garbage collection vehicles equipped with hardware capable of reading RFID identifiers.

Customized software platform capable of storing and generating statistics on the volume of waste generated from the level of citizen to the level of municipality.
