endpoints!

REVOLUTIONISING COMMUNICATIONS

At Acrobits, our goal is to simplify the complex world of SIP communications by providing fresh ideas and outside the box solutions. By using only our own proprietary code developed by our engineers, we are able to adapt and advance our products to meet our customers' ever-evolving demands (such as our pioneering use of Push notifications to prevent battery drain). We strive to provide intuitive, user-friendly solutions for every possible end-point, and are renowned for our level of dedication. Whatever your needs may be, why not let Acrobits show you how simple and cost-effective SIP communications can be?

We have worked with Acrobits since the launch of our mobile apps in 2009. Thanks to their innovation and skill, our mobile VoIP products have grown steadily and their success has never wavered.

Christophe Beaud
CEO Peoplefone
(Switzerland)

What Acrobits does?

Branding

Our range of corporate products will empower your business, allowing you to provide your customers superior quality voice, video and messaging at the push of a button. Whether you're looking for someone to help in developing your own private, branded app, want to simply add your VoIP service to our list of registered providers our expert team can provide you with an unsurpassed level of solutions, services and support.

Retail

"**Acrobits Softphone**" and "**Groundwire**" continue to pave the way forward for SIP communications. Our reputation for usability and our commitment to innovation are just a couple of reasons why Acrobits is quickly becoming the leader in SIP technology. Whether you're looking for a simple, user friendly Softphone or a fully functional SIP client that can perfectly replace your business phone, our iOS and Android apps are guaranteed to fit the bill.

OTT

The Acrobits platform offers amazing functionality and flexibility, enabling OTT providers to build custom solutions that can be changed or upgraded with new modules or features as needed. With a simple user interface, Push notifications and all of Acrobits other industry-leading features, functions and seamless server integration—Acrobits can provide all the tools necessary to establish your business as a leader in the OTT market.

SDK

Acrobits' very robust Mobile SDK provides seamless communication over Wi-Fi, 3G, 4G and LTE networks on both iOS and Android smartphones. The power of our SDK rests in the enriched communications it enables. Calls may be enhanced with video, chat, IM, media and file transfer.Contacts with rich communications services are marked as such and may be converged and synced with your network contacts in a single phonebook. Presence is also indicated along with geolocation, avatars and services available. All communications are integrated within a single interface: be they calls, SMS, MMS, IM. We also support push notifications for better battery performance and user experience.

Acrobits has developed its own extensive proprietary software library managing voice, video, server and client-side GUI applications. We are on the cutting edge of development, exploiting the latest advancements of the RCS communication standard. Our easy-to-use SDK encourages telcos to create rich HD voice and video applications and bring them to market in record time to remain ahead of customer demand. Most of the code is written in C++ and ported across both the iOS and Android platforms accordingly. All of the code is developed in house including our own SIP stacks and we don't use any external open source code except for the licensing of common CODECs.

Cloud Softphone

Acrobit's award winning Cloud Softphone is a revolutionary product that allows businesses and providers to create their own fully customized, branded mobile SIP VoIP Client in minutes—without the usual cost and hassle of development. Reliable, easy to use and even easier to setup thanks to QR code support that allows users one-touch provisioning.

By taking advantage of all the latest Android and iOS capabilities, Cloud Softphone offers the best voice, video, messaging and more. Winner of the 2013 TMC Labs Innovation Award and recently awarded the 2014 TMC United Communications Product of the Year, Cloud Softphone is the mobile SIP client you've been searching for. Visit www.cloudsoftphone.com and get your own branded app in 24 hours!
