

# Global Mobile Connectivity

FOR IOT, BUSINESS CRITICAL SERVICES, PRIVATE NETWORKS, MARITIME AND MORE

## EXTENSIVE GLOBAL FOOTPRINT, ACROSS LAND AND SEA

Telecom26 offers a truly global connectivity solution for personal and device connectivity, backed by a unique mix of network assets. A full Operator Member of the GSMA, our solutions deliver data and remote connectivity for mobile services and applications.

We provide secure, optimised global connectivity for enterprises, OEMS and NGOs, who need cross-border solutions and a single delivery partner.

### FLEXIBLE PRICING AND WORLD-WIDE COVERAGE

Our pricing and packages meet any data requirement, with coverage in more than 200 countries and over 600 mobile operator networks. Inbound roaming enables full voice and data access.

### OUT-OF-THE-BOX OR CUSTOM

Our expertise, knowledge and flexibility enable us to offer tailored solutions, designed to meet specific and challenging requirements. Tell us what you need – and where and we'll build the network that fits.

### SIM AND WIRELESS DATA MODEMS AND ROUTER

Integrated modem and router with SIMs and 2G, 3G and 4G connectivity, providing managed connectivity and seamless handover to the best available network, for resilience and continuous coverage.

---

#### ✔ SIMPLE

We offer standard and custom data packages, ensuring you obtain the connectivity you need for your application. Remove the pain of working with multiple providers.

#### ✔ SECURE

Proactive vulnerability protection provide the highest level of security. Active interception alerting, defence against signalling attacks and SIMjacking, and private APNs.

#### ✔ SINGULAR

You benefit from a single agreement and bill, covering services in all countries, backed by a dedicated support team and rich analytics and reporting portal.

---

# Secure. Global. Managed.

BUSINESS CRITICAL COVERAGE. WHEREVER YOU NEED IT.

**Fully standards-based, our flexible architecture delivers Tier-1 performance for critical applications and services.**

We cover 2G, 3G, 4G and other wireless technologies, with eSIM / eUICC, providing convenience and reliable coverage with managed solution options.

Our coverage is secure, resilient and can be tailored to meet specific and evolving needs. backed by a globally distributed core network, optimised for mission-critical services. We help our customers obtain coverage, wherever they need it.

We also offer partnerships for revenue share and managed services.

DATA CONNECTIVITY FOR ESSENTIAL SERVICES AND USE CASES...

- |   |   |
|---|---|
|  Maritime, on-shore, near-shore & at-sea         |  Fleet management & logistics                          |
|  Healthcare data collection & remote diagnostics |  Utilities & renewable energy remote site connectivity |
|  Rail & transportation IoT connectivity          |  Remote & off-shore infrastructure                     |
|  Private networks for secure access              |  Pipeline monitoring & sensor data transfer            |

## KEY BUSINESS FUNCTIONS

### ✔ SELF CARE

- Online trouble ticketing
- Customer visibility and tracking of tickets
- Automated troubleshooting and FAQs
- Access to service and device documentation

### ✔ USER ADMINISTRATION

- Hierarchical account management configuration
- Flexible role based permissions

### ✔ ANALYTICS AND REPORTING

- Lowest data increment billing possible
- Usage alerting, suspensions and throttling
- Near local service rating cost
- Least cost, profile based steering
- Prepaid, postpaid and solution based pricing

### ✔ SIM MANAGEMENT

- Mobile service activation & suspension
- Programmable SIM (multi-profile, multi-IMSI)
- Authentication of devices and services
- Visibility into active SIMs globally
- Service & identity vulnerability alerting

### ✔ PROFILE MANAGEMENT

- Zero touch automatic provisioning
- Configure MSISDN and IMSI per subscription
- Provision services and preferred networks remotely
- Programmable steering: coverage/cost/performance
- Permissions based service and application restrictions
- Create alerts based on SIM activity
