# Radix VISO MDM with VR Command Center - VR (Virtual Reality) device management!

VISO MDM is designed to remotely manage VR/AR devices from a wide variety of vendors. Using VISO, you can manage, monitor, update and support your VR/AR device fleet, wherever they are located, in your network and beyond.

The VISO VR Command Center add-on module takes VR/AR device management to the next level. Managing, synchronizing and moderating a group of VR devices is now easier than ever. Sync files, launch apps, lock controls, play videos on all VR devices simultaneously and centrally with a click of a button.

Main features

- Remote real-time device management
- Synchronized Video (play, pause, stop, skip)
- Real-time group "cinema-like" experience
- Software distribution and updates
- File distribution and synchronization
- Policy enforcement with web and app filters
- Kiosk modes for single/multipurpose usage
- Grouping and tagging
- Screen sharing (one to many, many to one, 1:1)
- Device-level usage history and reports
- Preconfigured workflows

And much more!

Tailored for VR/AR management

VR/AR devices operating in classrooms, training centers, universities, tourist attractions and enterprise environments need remote management. Radix VISO VR device management is tailored for managing VR/AR devices in such scenarios with a unique set of tools and interface for a synchronized experience.

VISO VR Command Center

- Set and coordinate all VR/AR devices
- Simultaneously launch apps
- Synchronized Video (play, pause, stop, skip)
- View live device thumbnails / stream
- Allow, block or lock apps
- Apply kiosk modes
- Establish end-to-end visual communication
- Share interactive virtual whiteboards
- Send surveys and quizzes
- Transfer files to all VR devices simultaneously

Synchronized video between all devices

Harnessing the power of our unique and intuitive tool set, along with the power of the VR/AR device of your choice, makes Radix VISO one of the most comprehensive, easy-to-use and robust device management and MDM solutions for VR/AR. VISO comes equipped with a powerful backend platform, lightning-fast communication layer and native integration with your device and with 3rd party technologies.

Device administration

- Enroll with Google EMM / Google Play
- Enroll manually (side-loading)
- Factory firmware integration support
- Device info: Model, IP, MAC, S/N, ID etc.
- Set lock-down kiosk modes
- White/black list applications and websites
- Analyze usage patterns and insights
- Set power management schemes

Start managing your VR/AR device with Radix VISO
