singleton

Idea — Code — Product

Every line matters.

We follow a simple narrative: software is about making machines work for humans.

The world is already full of stupid code.

That's why we refuse to reinvent the wheel and focus on your core business logic while reusing the obvious.

# Our clients have success cases all over **Europe** and **Asia.**

singleton

Apps

We use React Native to make two apps with the effort of one.

Ridango

— Ticketing Apps in Sweden & Lithuania

— **Ridango**

Brief

Ridango is offering public transportation platform for cities and municipalities all over Europe, including Sweden & Lithuania,

Being a Ridango's official app partner, we helped Ridango to create an everyday tool for the millions of commuters that travel with Ridango powered public transport. Purchasing, validating, checking the real-time traffic — all on your mobile phone.

Mission

Ridango apps are being built using React Native. Backend was developed by Ridango.

GSMtasks

— Fleet & Field Service Management App

— **GSMtasks**

Brief

GSMtasks is a tool to efficiently manage and analyse your mobile workforce. It's an everyday tool for many logistics and security companies all over Europe.

Mission

We rebuilt the apps in a native manner to put an end to the continuous performance issues the hybrid version had. We also added a bunch of cool features to make the tool handy while in a rush.

Stack

GSMtasks app was built using React Native with node.js middleware. Backend was developed by our partner Namespace.

Caroom

— Virtual claims handling

— **Caroom**

Brief

Mobile app for car rental, sales and insurance companies for identifying car body defects by taking a 360 grade view from the car which is supported by machine learning algorithm.

Mission

Create an app for car owners to compile report from car body defects to find a suitable maintenance partner (workshop) or to make pre-insurance inspection.

Stack

Singleton developed mobile app using react native which used REST API as data exchange layer.

Fitlap

— **Training & Nutrition Counsellor**

— Fitlap

Brief

Fitlap is a training and nutrition program that simplyfies the process of getting fit and healthy.
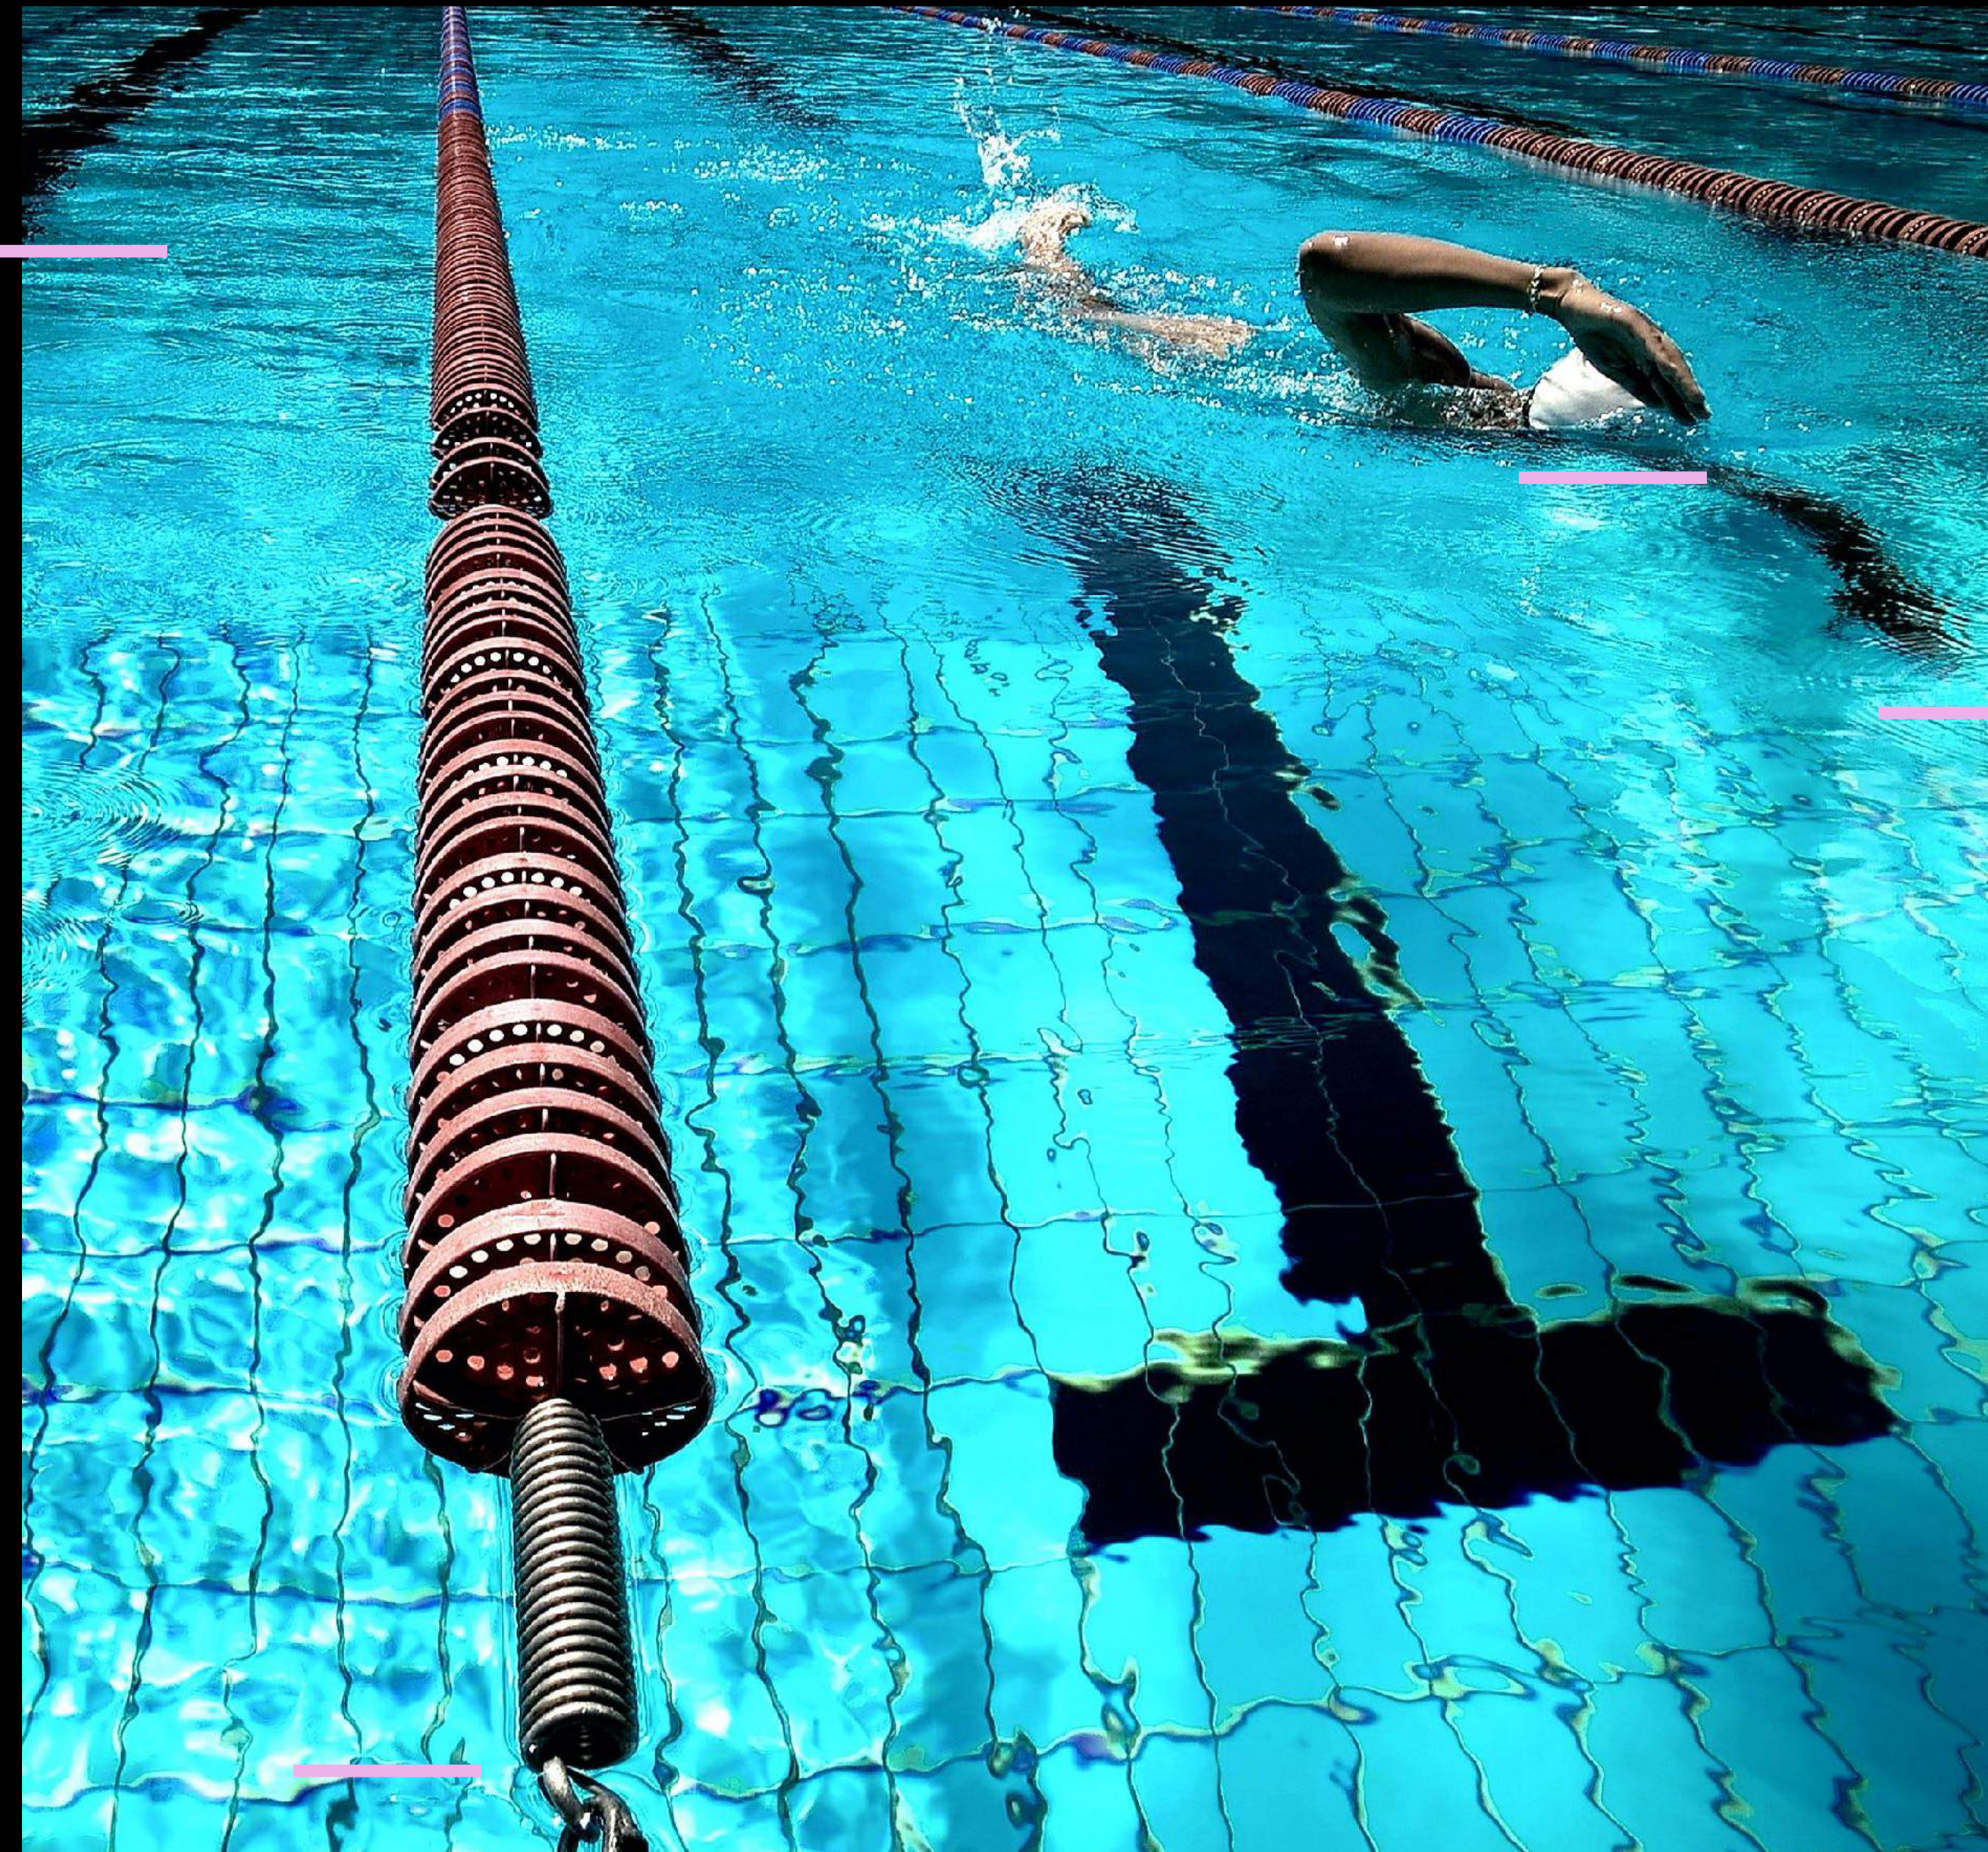

Mission

Fitlap guys were in need of a simple yet flexible mobile app that would be low maintenance, scalable to multiple markets and easy to use. To get the right content to a right user in a right language was crucial.

Stack

We built Fitlap a React Native app mixed with web views to keep the maintenance costs really low. To make it work smoothly we rewrote the API from the scratch and even refactored the existing DB schema.

Basaar

— Online Vintage Marketplace

— **Basaar**

Brief

Basaar is a mobile marketplace for vintage, preloved & new fashion. Shop the wardrobes of our stylish community and start selling items yourself.

Mission

We helped Basaar to roll out the 2nd version of Basaar as a hybrid app to keep the development costs low compared to building a native app. For a product in MVP stage this made great sense.

Stack

Basaar was rebuilt as a web app using Python with Django, Celery handling the async backend tasks. In frontend Vue.js was used and wrapped with Cordova for the native builds. Integrations included FB Graph, Smart Post and CC payments APIs.
