Caring for your loved ones

MP Tech

SOS alert, respond in case of emergency

Simple voice messages

Remote contact adding

Remote setting of the reminders on the 4family user

Monitoring the battery status

Determining the approximate location* of a 4family user

4family is a mobile application, thanks to which you can better take care of the safety of your relatives.

All this is due to the wide functionality of the 4family application, featuring simple interfaces installed on the 4family Host and 4family User devices paired with each other. The application allows you to remotely assist your loved ones with the use of the phone when needed, receive SOS notifications from the 4family User in case of emergency, or view in real time where their loved are.

SENIORS

Smartphone

CHILDREN

Smartband

Classic phone

Why is it worthwhile?

The 4family User gains:

- Information in the form of notifications concerning the low battery level of the 4family User's phone and remote assistance in managing his or her phone
- Possibility of remote supervision over a parent or child
- Voice and text message functions with advice or reminders for medical appointments, extra activities, etc.
- Receiving SOS alerts or security zone crossing notifications with the ability to react quickly
- Option to remotely manage the phone of the 4family user i.e. a child, including: adding events and reminders in the calendar, new contacts and applications

The 4family Host gains:

- Knowledge of the approximate location of the 4family User by the 4family Host
- Help from a 4family Host who can remotely set reminders for meetings, taking medication, other important matters on the 4family User phone
- Possibility to report an SOS in important cases
- Voice messages from the 4family Host with guidance or advice
- Remote help to manage your phone, its settings, applications and contacts

Technical requirements

The 4family User:

- Mobile phone with the Application installed by the Application Provider,
- Micro SD memory card, minimum card size 1 GB,
- SIM card with activated GPRS data transmission.

The 4family Host:

- Smartphone with Android operating system version 5.0 or newer or iOS operating system version iOS 9.0 or newer,
- RAM minimum 512 MB,
- Application installed from Google Play Store (Android system) or App Store (iOS system).
