Integration Services

Fundamentals first

When it comes to your product success, procurement, warehousing, preparation, integration, testing and deployment are fundamental in serving end-user customer projects. In a competitive market, customers expect to experience only the best possible outcomes with the highest quality of products, and you need to deliver.

A well-resourced integration partner can help you get the preparation, deployment and integration of your products done right – every time – so you can focus on the road ahead.

Assemble, integrate and test

From designing a solution to first article builds all the way to complex converged assembly and advanced testing, we take your concept from inception to creation. Our integration facilities in the United States and Canada are ISO 9001:2008-certified, each with more than 150 workbenches and more than 80 engineers who between them hold more than 2,500 industry-recognized certifications from CompTIA, Microsoft, Cisco and others. This ensures your systems are assembled, integrated, configured, customized and tested by the best in the industry. Integration services include:

- Architect solution
- First article build
- Design validation
- Build to order (BTO) – blades, chassis, servers
- Rack assembly
- Routers, switches and wireless integration
- Cable management

- Load custom imaging, applications and OS
- Endpoint device configuration
- Customization
- Spare parts management
- Project management
- Testing and prototyping
- Forward logistics

Tech Data
Global Lifecycle Management

Leverage our supply chain expertise

Customers prefer to do business in different ways in the market, and they need services that can respond and adapt accordingly. Whatever logistics model you prefer – from third-party logistics provider to comprehensive fulfillment and more – you can leverage the infrastructure of a world-class distribution and logistics expert to meet and exceed your operation's unique needs. We provide you with delivery, installation, integration, and related services responding directly to the way customers prefer to do business beyond distribution.

Warehousing and logistics simplified

With warehouses strategically located around the world, we can keep your products close to customer locations until delivery, no matter where they're located. Committed to helping customers properly manage assets, we also apply asset tags supplied by the customer or Tech Data to inventory.

When your name is on it, trust ours

Your name and reputation are on the line when you provide services. You can provide your customers with the solutions they need – customized and integrated in the way they want – using a team with global reach, deep technology expertise and supply chain regulatory compliance. Moving your services to Tech Data offers you instant scalability with off-payroll resources, freeing your technical resources for far more complex, more profitable, work.
