

AXINOM DRM (CLOUD)

axinom!

WHY AXINOM DRM?

Axinom DRM is a highly scalable multi-DRM service built on the latest standards including CMAF, MPEG-DASH, Common Encryption, and Encrypted Media Extensions.

It enables customers to target a wide range of client platforms with a single service by simultaneously supporting multiple DRM technologies (Microsoft PlayReady, Apple FairPlay, and Google Widevine) behind a unified API.

It is a service that aims at the future, providing leading edge capabilities to satisfy content owner requirements and provide additional value to you.

Axinom DRM is backward compatible with previous-generation architectures to ensure maximum compatibility with existing systems that previously lacked DRM capabilities. The DRM is highly scalable and performant.

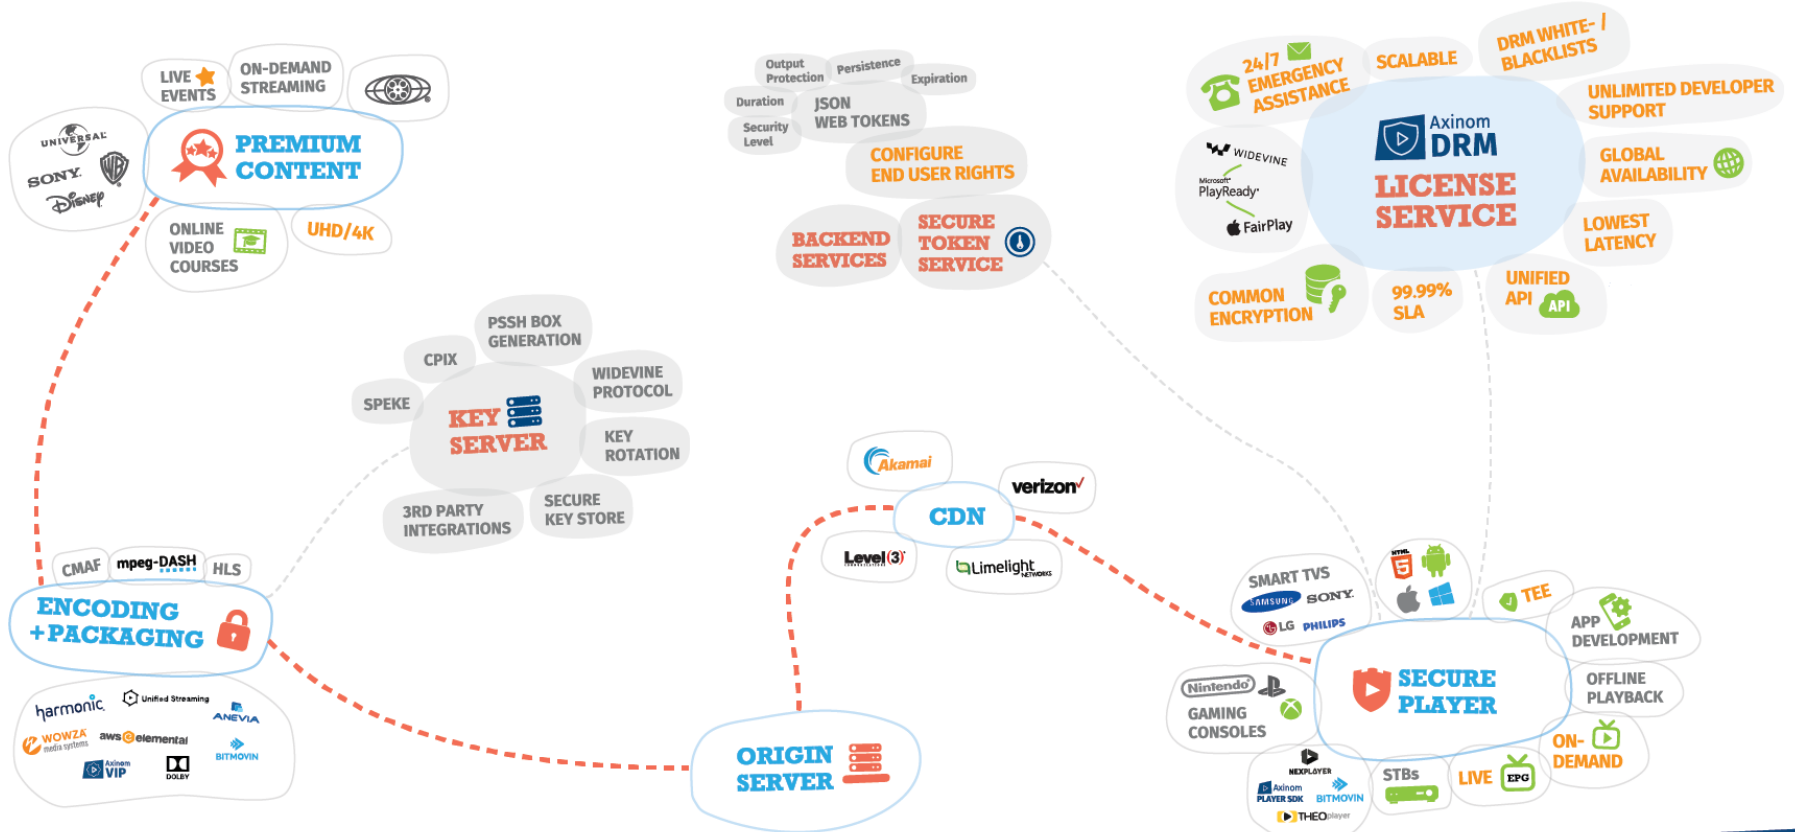

For maximum availability, scalability, and performance, Axinom DRM supports zero-downtime maintenance and a globally distributed cloud-deployment spanning several public cloud providers.

“*Extending the HD+ RePlay service to IDTV devices is a very important strategic step for us. Axinom was the right partner who – due to the technological know-how – could support us extensively during the conceptualization and implementation of an optimal DRM-solution. The use of Microsoft PlayReady enabled HD PLUS to complete a successful and sustainable entry into the IDTV-market.*”

*Joerg Eich
Vice President of Broadcast Services
SES Platform Services*

HIGHLIGHTS

BUILT FOR PREMIUM CONTENT

Licensing premium content from content owners in the best possible quality (4K(UHD/HDR), requires supporting latest technology (e.g. PlayReady 3.0) and a constantly updated DRM solution.

We continuously invest in and develop our DRM to keep it current and enable our customers to license the most valuable content.

MOST DEVELOPER FRIENDLY

Our developer-friendly Unified API supports all major DRM technologies, multi-key DRM, and protecting adaptive streaming among others. This allows customers to select the best approach for each platform without requiring significant new development work.

BEST-IN-CLASS PARTNERS

The delivery and presentation of premium video content involves many factors, of which DRM is merely one. Axinom is an end-to-end solution provider that partners with various companies to fulfill all the different aspects of a project, enabling the final result to be tailored specifically for your needs. We are able to integrate both in-house products, custom-developed code and third-party components into a solution, always taking into account the optimal path towards goals.

HIGHLIGHTS

POWER OF THE CLOUD

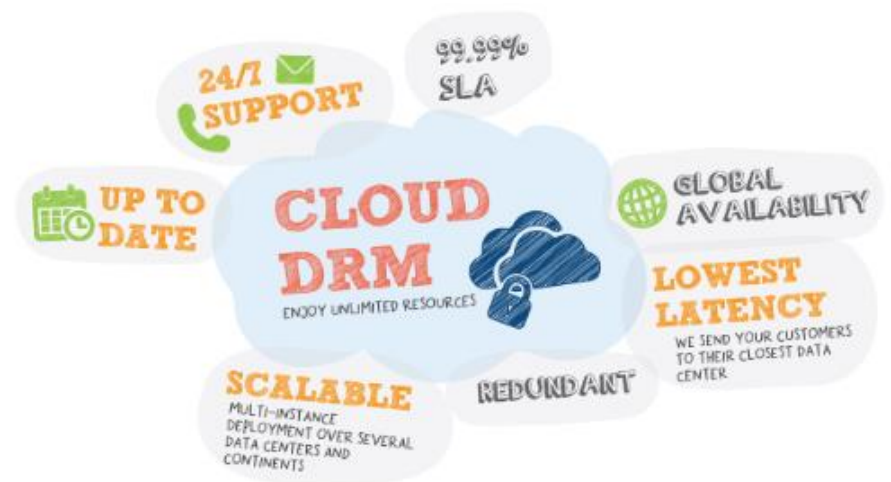

Axinom DRM is built for the cloud (and can run on-premises). For maximum availability, scalability, and performance it supports zero-downtime maintenance and globally distributed cloud-deployment spanning several public cloud providers.

Axinom's customers enjoy 99.99% SLA with 24/7 globally guaranteed support.

SECURE PLAYERS

We have integrated various DRM-capable players into modern multiplatform solutions and can offer relevant app development, consulting, and integration. A thorough research and player comparison effort are usually desired at the start of any project, leading to a proof of concept with the most favored player that best matches the solution feature set.
