

## Artificial Intelligence

# AI Image Processing Service

## Image Analysis Services captured from Satellite and Drone

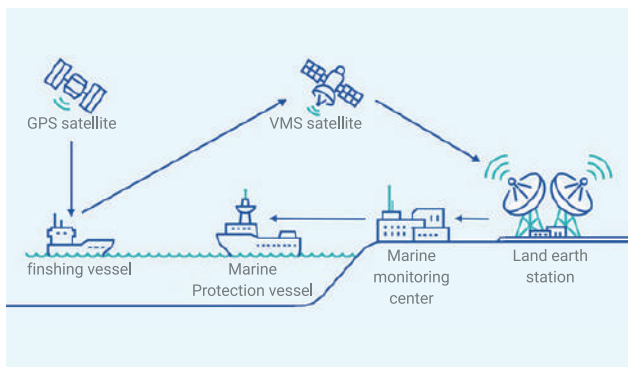

Hancom InSpace collects, classifies and analyzes various video images captured from satellites and drones, and track / manages static and dynamic objects based on the analyzed data.

### High quality image analysis solution

- Change detection of natural and artificial terrain such as palm plants, roads and buildings
- Object detection and classification using Deep Learning technology

## How It Works

### Phase 1. Image data acquisition

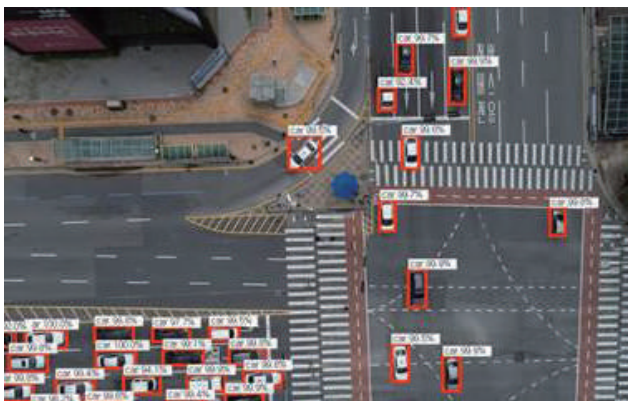

### Phase 2. InSpace services platform

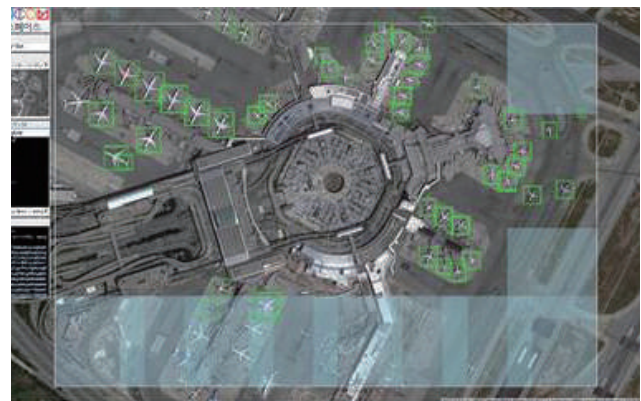

## Use cases

### Track moving objects from drone (Vehicle)

### Track moving objects from satellite (Aircraft, ship)

### Key Features

AI learning, Image Analysis, Drone

### Industry

Government, Agriculture, Construction, etc.
