SOLUTION

ProtecThor Parental Control solution provides clear and transparent rules of fair usage, allowing children to use their devices in the right manner not neglecting their duties and other activities. Besides fighting the addiction, the solution provides safe usage of the device minimizing the risks of reaching unsafe content and having unwanted communications. In addition to eliminating the mentioned risks and negative effects, ProtecThor provides additional values, like helping the parents to know their children's location in every moment and be aware that they reached their expected destinations. Parental control is not a tool for spying on children but rather a management tool to set sensible boundaries that help them to navigate and use their devices safely and effectively.

Visibility

ProtecThor offers ultimate visibility of the child's activities and usage statistics. Parents cannot look over the kid's shoulder to keep track of what they're engaging with, but this solution helps parents to keep track of the relevant activities: calls, messages, detailed application usage, child's movements – locations, statistics on screen time and specific applications. The parent can track the activities and statistics on the web, using the parent's mobile application or receive notification and statistical report emails. The interface offers a timeline view which shows all the different activities (calls, messages, application usage, location...) on one page in timely manner (like a Wall on Facebook)

Location

Using ProtecThor parents can be more relaxed, knowing their children's locations when needed. Location can be tracked automatically in defined time intervals or manually simply by pressing the "Where is my child" button. The geofencing feature provides simple definitions of relevant locations on the map (home, school, sport facility...). After that the system notifies the parents every time when the child arrives or leaves some of the locations. The parents are notified in real-time for example – the child left the school, or the child arrived home.

Limiting

The solution has granular capabilities to provide proper and fair usage of the device. From limiting overall screen time to limiting specific applications or groups of applications (games, social apps...). ProtecThor offers specific control depending on the day of the week, time or using a schedule which reflects the kid's school schedule and after-school extra activities.

Safety

Safety is the essential component of the solution. ProtecThor provides different mechanisms to keep the children safe using mobile devices: prohibiting harmful and improper application usage, safe browsing – blocking unsafe web content, limiting inbound and outbound calls and messaging and tracking the child's locations.

FEATURES

- Calls & Messaging – monitoring and limiting
- Application monitoring and limiting
- Usage time limiting
- Hardening and settings protection
- Timeline – unified activity tracking
- Reports
- Location tracking and Geo-fencing
- Parent Mobile App
- Secure Browser / Content Filtering
- Daily Tasks / Awards

About Unicom

Unicom is a group of companies, focused on system integration, software development, cloud cybersecurity services and IT distribution, nurturing a culture of innovation and people development. The main customer segments of the company are telco, government, finance and corporate sectors. The strongest expertise is on cybersecurity, network and IT infrastructure, analytics solutions and product development. The IP portfolio includes: UniTF Cybersecurity Management Platform (SIEM & UEBA), Mobile device and parental control solution, Carrier-grade lawful session tracking, Consent and privacy management. Unicom operates a CERT and Security Operation Center and provides cloud based and operational security services.
