

Intelligent Digital Identity Management

iDIM, brought to you by Mobile-Technologies, is an automated digital enrollment platform, that can be used for residents across both government and private sector transactions.

The iDIM solution serves as a digital transformation enabler, aimed at creating data-driven cultures, where customer and subscriber interactions are seamless and secure.

Some of the use cases of iDIM include:

iDIM Key Feature:

-  **Digital automation**
All-in-One Digital Identity solution with user-friendly and intuitive interface
-  **Robust mPOS (mobile-point-of-sale)**
hardware to automate customer enrollment and digital transactions
-  **Fast & accurate verification**
to address enrollment challenges
-  **Seamless integration**
with 3rd party solutions and business environments
-  **Built-in biometric engine**
to perform identity proofing
-  **Flexible customizations**
with service layers within any transaction mechanisms

iDM benefits

Pre-registration

digital profiles will help in pre-filling forms for service transactions and facilitate other operations, finalizing the process in a matter of minutes rather than days.

Enrollment and Identity Proofing

minimizing the threat of identity fraud at initial customer enrollment stages, during online transactions or involving SIM swap activities.

Creating data-driven cultures

iDIM capacities make for the perfect addition to any business vertical.

Data analytics

helps to achieve data integrity and centralization

Various options of data capture

all-in-one biometric tablets supporting fingerprint scanning, facial recognition, barcode, QR code, MRZ Scanning as well as OCR (Optical Character Recognition)

Security mechanism

Ensuring that the process is handled securely, providing the customers with a seamless onboarding experience, thus minimizing the underlying risks of data breach.

Certified hardware by MT

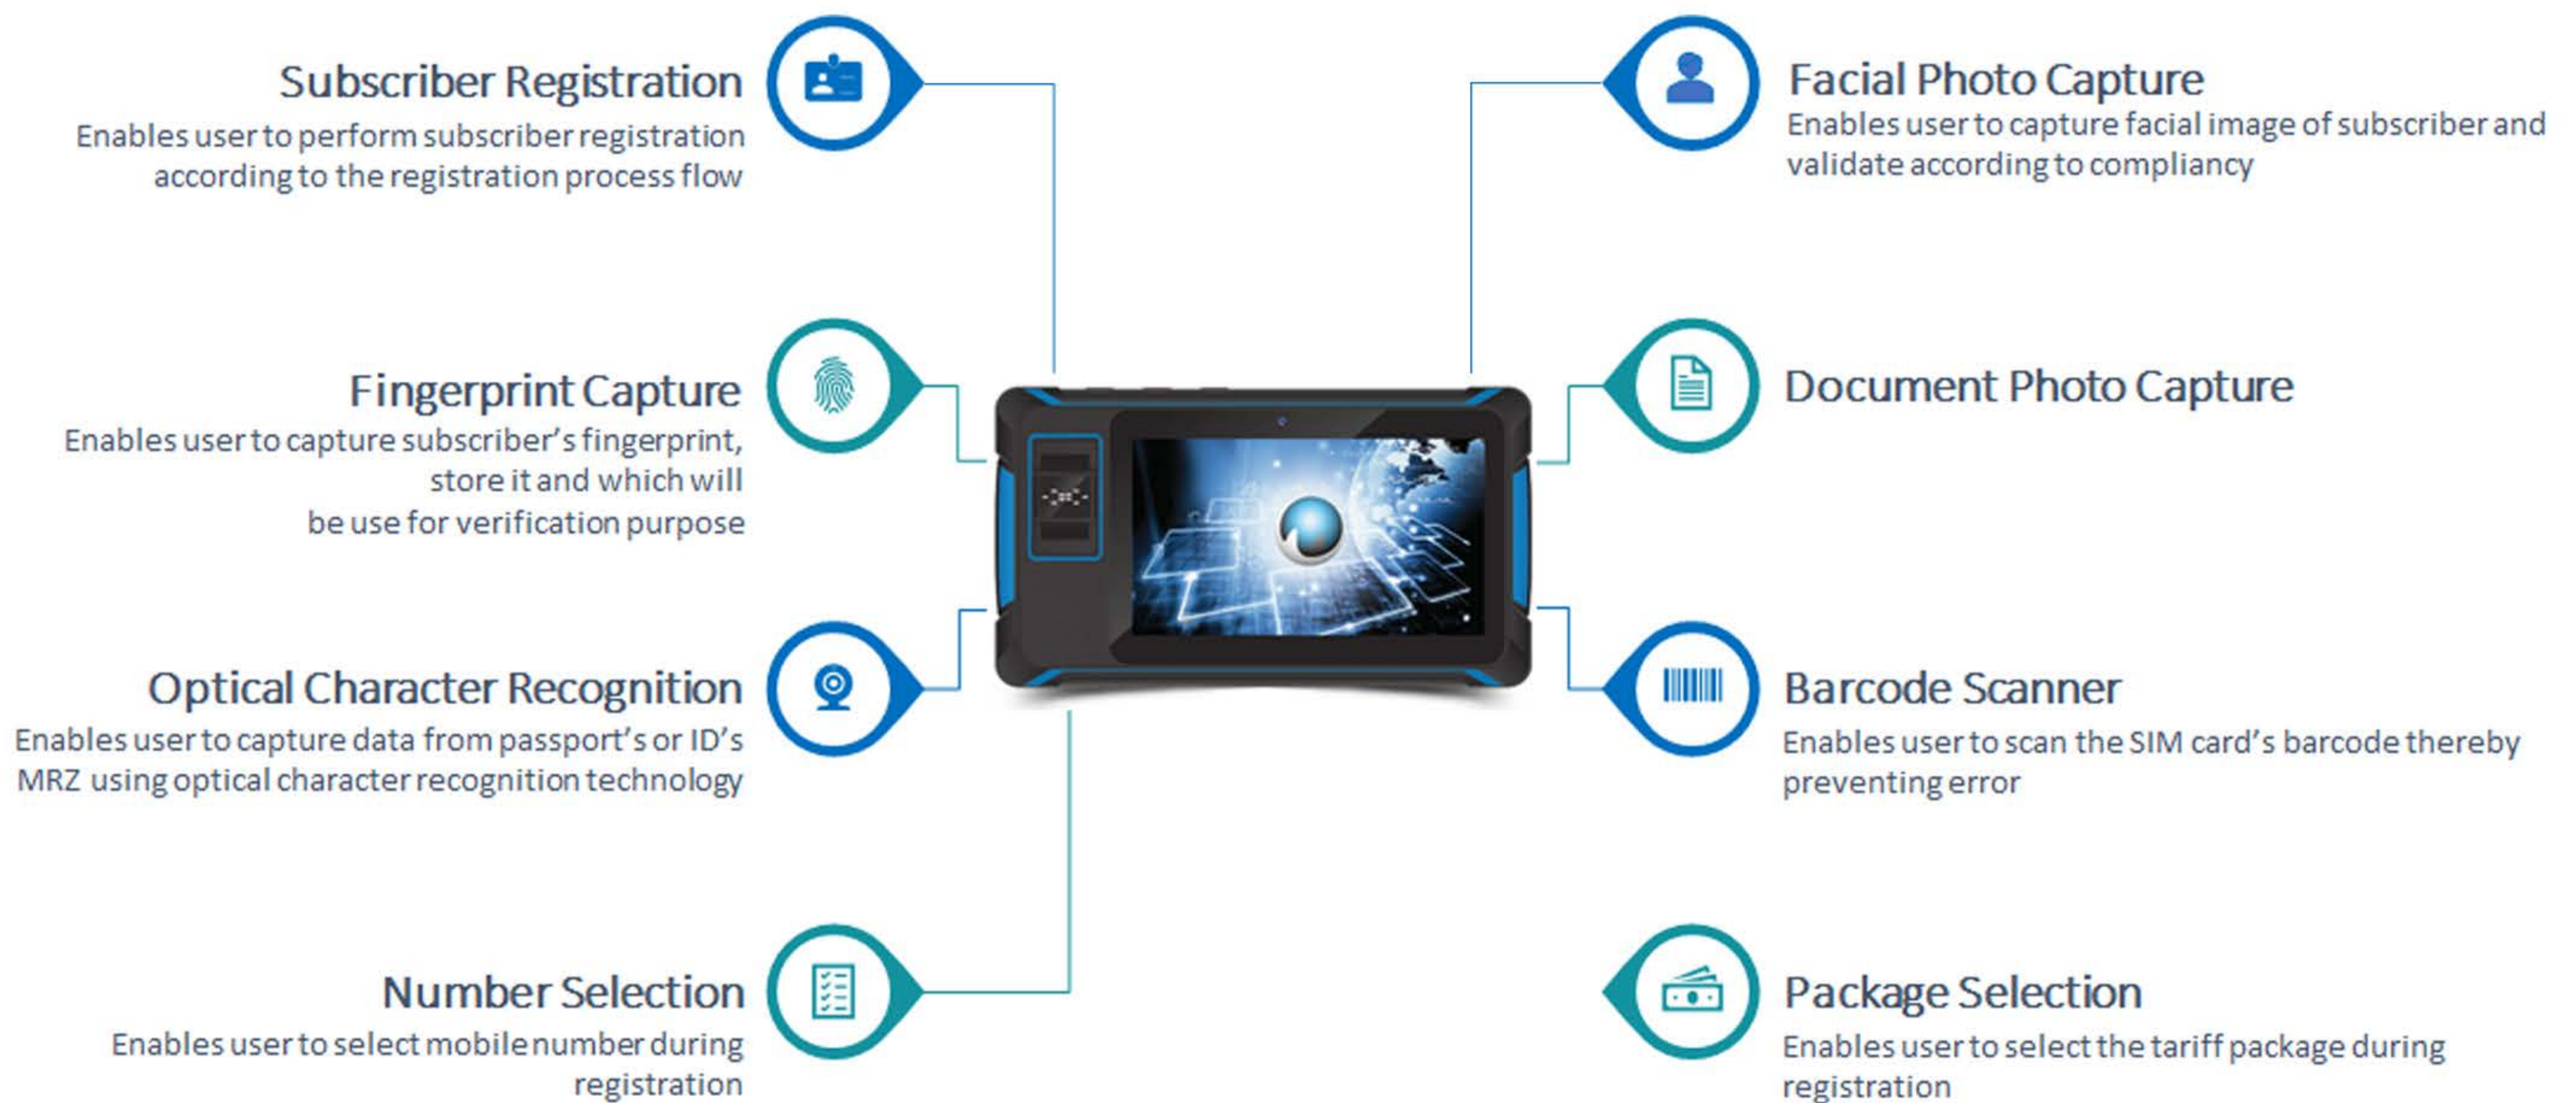

Asperis X7 comes with NBTC approvals

Regulatory compliance

iDIM ensures compliance for GDPR, POPA

High-tech registration solution with Mobile Interface
