

Fleet management

- **Real-time monitoring and analytics.** Enhance your fleet performance, keep the cargo safe at all times, make employees drive responsibly, and save money on maintenance.
- **Fuel consumption control.** Monitor fuel consumption in all types of vehicles, diesel generators, and filling stations.
- **Driving safety.** Employ Wialon to create a comprehensive driving quality assessment model specific to your enterprise. The analysis is based on preset and custom violation criteria and allows to identify reckless drivers.

Eco Driving

Create a customizable driving quality assessment model based on violation criteria. Improve fleet and staff safety, reduce fuel costs, and enhance cargo integrity and preservation.

- **Detailed presentation of driving quality** for each vehicle in a user-friendly visual format.
- Access to the **details on violations** with tracks and event markers on the map.
- **Evaluate the driving quality** based on various criteria and rank drivers based on their overall performance.
- **Violation criteria presets** for cars, buses, and trucks for quick configuration.

Tachograph solutions

We offer special applications for you to control driver activity in accordance with EU legislation.

Use Tacho Manager to upload tachograph files to servers or HDDs and view detailed information on each driver.

- **Get THD/DDD files fast and easy:** upload the file manually, or send a command to do it automatically from any location.
- **Build a complete picture:** view all drivers in the table and study the activity span and detailed information on each employee.

Study the data from THD/DDD files in Tacho View. The app marks driving, work, rest, and availability periods, and displays the information on the timeline. All the data is available in reports on driver activity and infringements – print them from the app and hand over to the managers right away.

wialon | DEVELOPED
BY GURTAM

Trusted: 18 years on the international market

Universal: seamlessly works with 2,300+ types of hardware

Flexible: delivered as a cloud and server-based solution where you can configure every parameter

Supportive: 24/7 technical assistance to 1,900+ partners globally

Large-scale: 2,900,000+ assets tracked in 130+ countries

Extra: Wialon-based applications for business-specific tasks

Comprehensive: 300+ monitoring parameters to control and report on

VIDEO MONITORING

Video monitoring

Wialon brings together satellite monitoring and video surveillance in one platform for you to reduce accident rates, increase fuel economy, and improve safety on the road.

Use **video playback and livestream** to capture, observe and analyze any road events you might need to make decisions for your business.

View accident videos right from the reports: accurate unbiased video records enable precise incident analysis.

CMSv6 integration: connect devices that support CMSv6 in a snap.

Easy setup and configuration both for the service provider and the end-user offer a faster start to using video monitoring.
