## Company Introduction

Founded in 2013, 12CM have been delivering creative solutions that untangle complex challenges and lead to innovation to many partners all around the world. We have been steadily moving into the global market by leveraging our innovative technology, called Echoss. As of 2021, 12CM has formed partnerships with over 125 companies in the Korean domestic and global markets and have shipped over 500K stamps worldwide.

We are now exploring new ways to expand our business outside of the Korean domestic market, forming new partnerships or forming joint ventures in key markets.

## Product Details

### Echoss Stamp & Echoss Solutions

12CM provides several cloud-based software platforms for O2O (offline-to-online) services. The Echoss Platform can be incorporated into various Fintech and Big Data solutions. These services are authenticated by the Echoss Stamp, our proprietary technology that uses unique touch patterns built into every stamp to stamp directly on users' smartphone screens. Not only can these services provide a fun, interactive experience to users, but by offering an affordable and effective marketing tool to small and mid-size businesses.

The Echoss Stamp, 12CM's key product, can be applied to a wide variety of customer engagement, marketing, and Fintech services, all supported by the Echoss Platform. By collecting, processing, and combining this data with other sources, we can meaningfully apply Big Data analysis models and transform simple marketing and commerce services into disruptive tools for change.

### Stamp Card Wallet Mobile App

After years of experience in providing mobile marketing programs, 12CM has developed a white-label mobile application where various local brands and businesses can join to offer loyalty program with Echoss Stamp. Launch the revolutionary new digital loyal app both on Apple App Store and Google Play Store, with 12CM's support from app personalization to the branding and design. The app is currently serving countless loyal users in UAE, Canada, Australia, US, Indonesia, and Japan.

#### [Key features]

- Big savings made possible through fun, easy, and friendly app experience
- Earn stamps to collect coupons for discounts and promotional rewards
- Discover new stamp offerings by using the "Nearby Stores" feature
- Check out your stamping history and all the places you gained stamps and coupons
- Stay informed on updates to new stamp opportunities at your favorite stores

# 3i Inc.

[www.3i.ai](http://www.3i.ai)

[sno@3i.ai](mailto:sno@3i.ai)

[getpivo](#)

## Company Introduction

3i Inc. is a global software and hardware innovation powerhouse whose mission is to transform the way the physical world interacts with the digital world. Based in South Korea, 3i delivers end-to-end solutions for its clients using computer vision and artificial intelligence. Individuals and enterprises can record and share ideas and valuable experiences using immersive technology and improved communication.

Their interactive smart pod, Pivo, empowers individuals and working professionals to capture moments and connect with their audience using their smartphones.

3i also created Beamo, an enterprise-grade digital twin platform that connects people and places. Beamo enables anyone to create immersive virtual tours in 360° of their mission-critical facilities and remote sites.

## Product Details

### Pivo Pod Red

Pivo is an interactive smart pod built for content creation. Make videos, live stream, video call, give presentations and create virtual tours all with just a few taps on the screen. Pivo can track faces, bodies, objects, and even horses with Auto Tracking technology. To top it off, users can enjoy 12+ built-in special effects to take photos to the next level.

### Pivo Pod Silver

Pod Silver offers everything you get with Pod Red, but it's 2x faster! The interactive smart pod rotates at a speed of 4 seconds per 360 degree. Pod Silver is perfect for any user with an active lifestyle (dancers, horse riders, roller skaters, athletes etc). Never walk off screen and ruin another almost-perfect take again.

# AIMBROAD

## Company Introduction

We are the world very first Football AI platform company to show LIVE data of a football match.

Surprisingly and unfortunately COVID-19 came in this year 2020. It has brought disaster in the economy worldwide. Apparently, it has accelerated our economy toward non-contact period where almost everything we face, we use will gradually get digitalized.

AIMBROAD is a Football AI platform company where we intend to provide for football fans to get easier access on digital transformation. Moreover, we are walking towards not only for football industry but also for the entire sport industry to develop and accelerate on new digitalization era.

Football industry getting digitalized and It is coming in blink of an eye. Let's be the change together.

## Product Details

### The world's first Football AI Navigation

People used to look for destinations by maps or their memories but now navigation is almost indispensable to people who drives a vehicle. It provides various information to predict the destination status and find the best time and shortest distance every minute.

Therefore, the digital experience, which convenience and efficiency are irresistible to all users become part of our lives. Artificial intelligence technology will now be applied to the football industry, and an innovative artificial intelligence service which predict the team's attack direction and tactics and victory of both teams will be dominate the global football industry. Football Fans of all professional league, including national games, will experience amazing artificial intelligence technology by smartphone. After they experience digital habits, coming back to the traditional sense of sports will be no longer optional. The way of interacting with the sport will be quite different and this will be tradition on the future generation.

### Voice Navigation

We can show the direction of players performance with Sound and Touch.

We are currently developing and cooperating with the company for providing a service to visual impairment.

Ears and sense will become their eyes.

### AI Highlight & News

We provide world the fastest highlight and news by digital data. If customer set up to get alarm from us, we provide all the information that customer wants in just 1 second. And right after the match our AI makes the news of whole match, "VERY objectively"

# apptest.ai

+82-2-2040-6788

https://apptest.ai

june@apptest.ai

apptestai

## Company Introduction

Apptest.ai has been providing AI-based fully autonomous app testing cloud service since 2018 in order to solve problems many companies may experience in finding error and bugs in their mobile services.

By providing 'fast AI testing without human intervention' on the top of our mobile device cloud, we provide state of art and continuous AI-First QA service to businesses in short of IT professionals.

## Product Details

### Apptest. AI

We released AI Cloud solution to the public where you could upload or link your Android/iOS app. The automated testing will run through 100+ mobile devices simultaneously, pass through logins, explores your apps to identify paths and causes of errors. This completely removes the burden for app testers to script or create a workflow.

### Best When

#### One Click Smoke Test

Save countless hours of UI and menu testing. Before you jump into serious QA, let your Bot smoke test your apps.

#### 24x7 AI Testbot Monitoring

Every app need to be tested for newly released phones, content updates, and app/service changes. Apptest.ai can monitor your services for 24x7 and report potential issues with errors and problems.

#### Test on Real Devices

Take full advantage of our real device cloud. start testing the capacity of your mobile app and service on the fly

#### Bullet Proof App Build with CI

Apptest.ai can be easily added to your development pipeline. Whenever you build an app, it will act like a never-resting sentinel, continuously finding errors for you.

### Our Partners

# Asleep

<https://asleep.ai/>

[sleep@asleep.ai](mailto:sleep@asleep.ai)

<https://www.linkedin.com/company/sleepfy>

## Company Introduction

Asleep is a sleep tech start-up based in Seoul, South Korea. We digitize the sleep process by conveniently tracking, accurately analyzing, and providing all-day sleep coaching to improve sleep. Asleep sleep technology utilizes contactless tracking and analyzes users' sleep stages through an IoT solution. We have built an RF sensing algorithm which leverages the popular Wi-Fi technology to measure users' movement and breathing patterns.

Asleep's AI diagnoses sleep quality, sleep stage, and sleep disorder in a medical grade that matches those of human analysis conducted by sleep technicians. Asleep AI analyzes the temporal patterns and cross correlations between breath and movement. It can diagnose snoring, sleep apnea syndrome and even the most critical sleep disorders, offering you an optimized personal sleep coaching.

## Product Details

### Sleepfy

Asleep Sleepfy tracks and analyzes your sleep states through AI-based IoT solutions. It's fully contactless.

Sleepfy can measure your movements and breathing patterns during sleep. Asleep AI can accurately analyze your sleep stage. It can diagnose snoring, sleep apnea syndrome and even the most critical sleep disorders, offering you an optimized personal sleep coaching.

# Coconut Silo

+82-1688-3142

<https://coconutsilo.com/>

[contact@coconutsilo.com](mailto:contact@coconutsilo.com)

<https://linkedin.com/company/coconutsilo/>

## Company Introduction

Coconut Silo is a logistics/commercial vehicle specialized mobility startup. We launched the company while at Hyundai leveraging in-house resources and getting traction with partners including Mercedes-Benz, Daimler and Fujitsu. We accelerate the logistics value chain in various countries starting in South East Asia. With our advanced freight logistics platform "COCO TRUCK", we connect the different players in the logistics market to one single place. With big data we enhance efficiency and enable logistics companies to maximize the number of orders received.

## Product Details

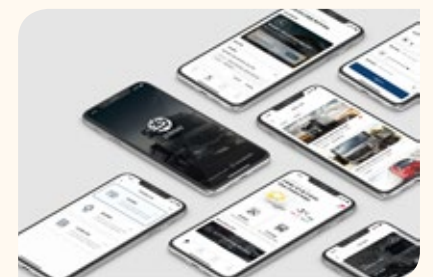

### COCO TRUCK

COCO TRUCK is an advanced freight logistics platform for shippers and carriers, connecting whole actors in the logistics market into a single platform. It consists of 3 smartphone applications for all types of stakeholders, 2 PC webs for B2B customers (cargo owners and logistics companies) and an admin web for us in order to manage customers efficiently. B2B customers can track their resources no matter where they are. They can take actions during the transit procedure, which could be a perfect solution for COVID 19 era. The procedure works like this: once cargo owners register their cargo details, our platform automatically suggests appropriate prices for the cargo, which helps cargo owners and logistics companies to negotiate the price within several touches, within our platform. After that, B2B customers will make a transit contract, and logistics companies allocate the order to the right truck driver. Our platform enhances credibility and efficiency since truck drivers have to get a signature from the person in charge in both pickup and drop-off point. Not only that, our platform updates truck driver's real time location periodically and helps logistics companies and truck drivers to get more orders based on 'smart consolidation system', which matches additional cargoes during the transit process. Once the truck driver arrives at the drop off point, transit procedure gets done right after the truck driver gets a signature from the person in charge. Furthermore, Truck Hailing Platform analyses the logistics history that users have made, to provide enhanced efficiency and ways for more profit. 4 main big data technologies like smart consolidation system, matchback algorithm, automated price suggestion and targeted 3rd party services solve problems in the logistics market. To explain further, a smart consolidation system enables truck drivers to move multiple cargoes in a single transit procedure. Matchback algorithm helps truck drivers to get an order on their way back to the garage so that users can maximize resource usage. Based on the analysis of factors (like size, destination, weight, ...) that affect the price of the cargo, our platform automatically suggests the appropriate price. Most importantly, our platform aids users to reduce fixed cost expenditure by matching targeted 3rd party programs like insurance, fueling and maintenance perfectly based on the analysis of logistics history that users have made.

### Truck Doctor

Truck Doctor aims to solve problems in the truck maintenance market in Korea. In the current market, if a truck driver wants to make a repair request, they have to make phone calls or visit in person. Moreover, trucks have poor infrastructure, with only 1/20 of total personal vehicle repair shops even though they occupy 1/5 total registered vehicles. As you can see from just those numbers, there are a lot of problems in truck maintenance and management. In addition, truck drivers have limited information, which evokes them to access details within repair shops and inefficiencies and waste of money. Due to their unique characteristics, truck drivers cannot drive at least a day once they start the repair process. Since the truck itself is an office for truck drivers, it affects truck drivers' wallet. To solve these problems, we've integrated midnight maintenance services so that they can save their time and earn more money. Most importantly, truck drivers can make a repair request within several touches, and schedule truck maintenance. In contrast, repair shops can see their whole schedule with PC webs and manage inventory, conduct target marketing programs. Using Truck Maintenance Platform is easy. All they have to do is register their vehicle info, select a schedule from a calendar and visit. Based on big data technology, our platform automatically schedules the next repair schedule which does not require any operations from truck drivers. Repair shops can notify drivers easily with smartphone push notification.

## Dabeeo Inc.

+82-70-7777-2489

www.dabeeo.com

sales@dabeeo.com

### Company Introduction

[Explore the Indoor - Map Editor and Vision based Positioning Tech.]

Dabeeo is the company developing map data professionally and efficiently. The map data covers not only global but also indoor anywhere we are. Especially we are here with our INDOOR MAP Technology to enhance your in-building experience. If you are looking for such a helpful technology as map services for inside, just come to find us! We have technology for indoor maps, positioning, navigation and even robots. It is possible to make any indoor services with our map technology. We will be a great partner of you.

### Product Details

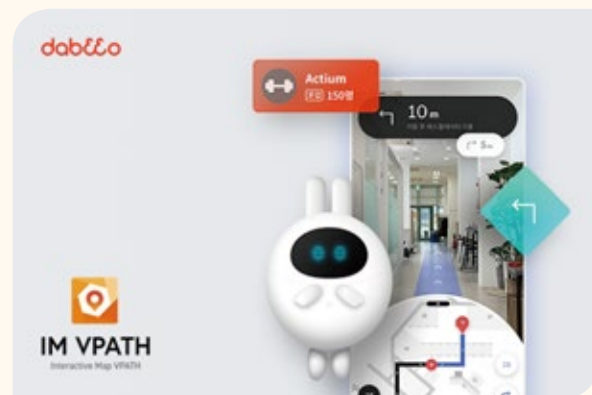

#### IM STUDIO

A platform service for A to Z of indoor map. Through this platform, you can easily generate, edit and manage indoor map data which can be used a various way with API/SDK for any of indoor service.

#### IM VPATH

VPATH stands for Vision-based Positioning System. This technology allows a precise positioning at indoor environment where there is no signals from any type of sensors such as GPS, WiFi, Beacon, etc.

## Hills Engineering Co., Ltd.

Hills-Engineering

hillsengineering

hills\_engineering

### Company Introduction

As a company that provides a standard platform for operating 5G and AI-based autonomous robots using IoT technology, Hills Engineering is the Cloud Service Robotics Lab and the Research and Development Center for AI based Robot Operation Standard Platform that can be applied to various business model autonomous robots by applying IoT technology.

### Product Details

#### Coro-bot®(Corona-Robot)

Coro-Bot, an anti-virus universal disinfection robot, can be applied to various places suffering from the current global pandemic including nursing homes where their residents desperately need to be protected against the novel coronavirus. This anti-virus disinfection robot is equipped with V-Arm and H-Arm that are flexible and thus suitable for many different environments. It also has an articulated robot arm to cover uneven surfaces and an air circulator to sterilize airborne coronavirus and other viruses with its far-infrared ceramic filter reaching 200 degrees Celsius. All these components together can effectively disinfect every venue people use.

#### Lo-Robot®(Logis-Robot)

Lo-Robot(Logis-Robot) is the first product to enable AI-based operations and 5G-based remote management.

This operation/management system maximizes user convenience by enabling robot operation efficiency optimization, autonomous maintenance and remote AS. Unlike other products with separate functions of autonomous driving, a function to follow pickers, and the shuttle system, these 3 functions are integrated in one Lo-Robot all together.

# Moneybrain Inc.

www.moneybrain.ai

info@moneybrain.ai

moneybrain

## Company Introduction

Moneybrain is an AI company, specialized in video synthesis and deep learning technologies. We create AI humans based on a real person, and it looks and speaks like the real one. Our technology is delivered as an automatic video creator and real-time conversational AI. Automatic video creator, named 'text to video', allows users to create video contents without investing resources simply by typing in your text. Real-time conversational AI, named AI human, enables enterprises to cover customer engagement with real-time conversational AI. We aim to help people who suffer from following technology trends overcome challenges of interaction.

## Product Details

### AI Kiosk : Conversational AI

Anyone who is in the following situations can use it.

- Want to engage with customers without investing a high cost.
- Want to deliver information more efficiently.
- Want to deliver educational content through real-time conversation.
- Need to provide real-time interactive services for the elderly.
- Want to take orders from customers more efficiently.

### AI Studios : Text to video

Anyone who is in the following situations can use it.

- Feel burdened with the cost of video production.
- Want to reduce resources required for video production.
- Want to produce more video content without additional resources.
- Want to make educational videos easily.
- Want to make a presentation video for real estate.

# Neubility Inc.

www.neubility.co.kr

info@neubility.co.kr

neubility

neubility

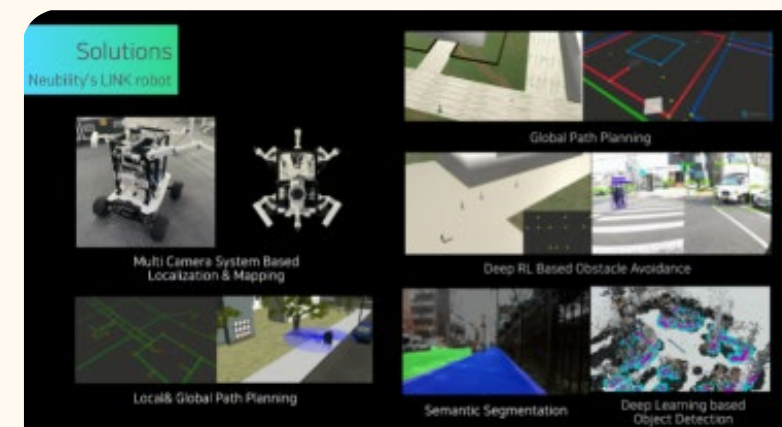

## Company Introduction

Neubility makes self-driving delivery robots using inexpensive cameras and various sensors, thus commercializing our robots at an affordable level. We aim to provide robot food delivery services in dense urban areas, providing budget-friendly robot delivery solutions for restaurant owners suffering from expensive delivery fees.

## Product Details

### Neubie Robot Delivery Service

Global food delivery industry has shown an exponential and rapid growth, but restaurant owners are experiencing low margins because of high delivery fees, which is due to the labor cost of food couriers. Neubility solves this problem using self-driving delivery robots, providing affordable delivery solutions to restaurants.

### Tech Stack

With inexpensive cameras and various sensors combined in Neubie hardware, our delivery robots replace the use of expensive LiDAR for autonomous driving on sidewalk.

# Nota Inc.

+82-2-555-8659

www.nota.ai

haejin.lee@nota.ai

company/nota-incorporated/

## Company Introduction

Nota made an innovative move on the development on the deep learning model compression technology. NetsPresso, our automatic model compression platform, can make AI smaller, faster, and energy-efficient, eventually allowing it to run independently on small edge devices.

## Product Details

### NetsPresso: model compression platform

NetsPresso is an automated AI model compression platform designed for deploying light weight deep learning models on different platform sand architectures from cloud applications to edge devices.

With Nota's model compression technology, we can deliver cost-effective vision-based AI solutions for facial recognition and ITS, etc.

We compress Alto make it smaller, energy-efficient, and run on in expensive constrained processors only using minimum hardware resources.

### Facial Recognition

Nota's facial recognition solution based on model compression technology is lightweight, fast, accurate, and secure so that it can be applied to various industries.

- Smart access control system: people can be effectively registered with face recognition in construction sites, offices, and communal facilities.
- Personal data management: healthcare devices can be customized by connecting the facial ID and personal data.
- Driver Monitoring System: it can protect drivers from severe accidents by detecting the registered driver and the drivers' distraction and drowsiness.

### Intelligent Traffic Monitoring System

With Nota's AI compression technology, we provide an intelligent traffic monitoring system that understands traffic situations at intersections with cheap low-end hardware. Through the analysis of the traffic data, our solution can give informative support to improve the circulation of traffic loads. Nota's features for ITS solutions are as follows:

- Vehicle detection
- Emergency vehicle detection
- Parking space analysis.

# Point Mobile Co., Ltd.

+82-2-3397-7870

pointmobile.com

scott.lee@pointmobile.com

pointmobilekr

## Company Introduction

Founded in 2006, Point Mobile is one of the fastest-growing enterprise device manufacturers in the world. For years, we have designed and built OEM and ODM products before we established our own brand of devices in 2013. We now offer a full range of handheld mobile computers, rugged smartphones, mobile POS devices, healthcare terminals, RFID readers, and portable Bluetooth scanners, as well as business solutions such as the EmKit.

As opposed to most other larger manufacturers, we do everything in-house: building our devices vertically which guarantees high product quality and fast turnaround times, a strategy proven successful by the company's rapid growth.

In 2020, Point Mobile became the first South Korean company in the enterprise mobility industry listed on the stock market, while we continue to expand our business and portfolio.

## Product Details

### PM30

#### ENABLING RETAILERS TO ADDRESS THEIR BUSINESS NEEDS

With a thickness of 10mm and a lightweight of 165g, the PM30 is our slimmest and lightest rugged device. Carefully tuned for the retail industry, the device is packed with performance features all in sleek and ergonomic housing. PM30 is equipped with a Qualcomm 2.2GHz Octa-core processor, 4GB RAM, and 32GB ROM, running Android 10 smoothly. It also withstands 1.5m drops to concrete and has IP67 water/dust resistance.

### PM45

Consumer smartphones may be easy to use, but their frailness and lack of security makes them unsuitable for the enterprise environment. As one of the market leaders for rugged enterprise mobility, we build devices to meet the US Military Standard 810G rating that ensures protection against fall, drop, shock, vibration, dust, water immersion, extreme temperatures, high altitude, and a wide variety of extreme conditions. The brain of PM45, Qualcomm Snapdragon, has an Octa-core 1.8GHz processor and provides unbeatable performance for any enterprise application in the field. Its X9 LTE modem will give you up to 300Mbps downlink and 150Mbps uplink speed.

### PM90

#### MOST POWERFUL RUGGED ANDROID DEVICE REDEFINING MOBILITY

PM90 is a refined and optimized device of our best seller PM80 while keeping the features that made it so popular. A 2.2GHz Qualcomm Octa-core processor powers the Android 9 operating system that the PM90 runs on with 4GB RAM and 64GB ROM memory as a standard option. The bright 5" display shows crystal clear information from any angle. All of the hardware buttons (except the power key) can be individually programmed with the pre-installed EmKit (Enterprise Mobility Kit). The 1D/2D slim imager engine offers convenient, reliable, and fast barcode scanning. PM90 comes with a battery with 2,900mAh capacity as standard, and an optional extended version with 5,800mAh. The housing is ink-black giving it a smooth and stylish finish.

## SOYNET

+82-31-8039-5377

www.soynet.io

jungpark@soynet.io

watch?v=uexlz9vxjxo

## Company Introduction

Recently, the introduction and utilization of artificial intelligence has been taking place in various industries very positively with the advent of the 4th Industrial Revolution. However, the performance is not supported at the actual application stage, and it has also been known as conundrum in edge device.

SoyNet takes the trained engines, such as model and weight parameters out of a general AI platform and can run them to get the same results by 2 times or 50 times faster depending on models.

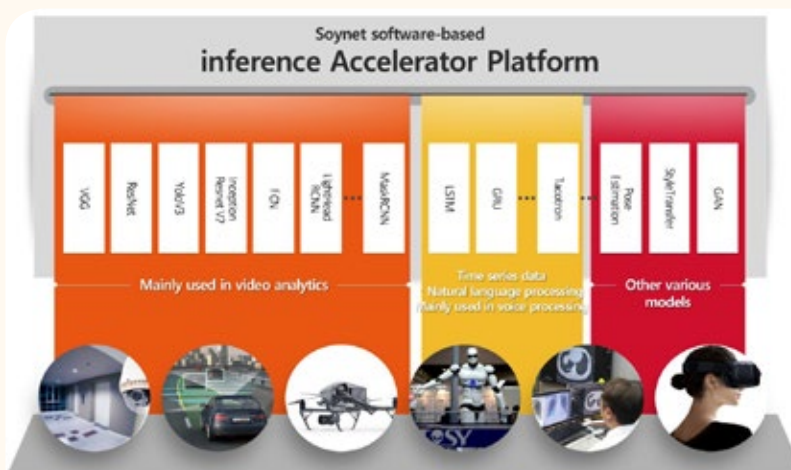

Any model trained in general AI platform such as TensorFlow, Caffe, Pytorch can be configured in SoyNet. In addition, we applied proprietary technologies (Patented) to optimize the AI environment such as memory, CPU, and GPU and accelerated performance by converting all modules into CUDA, CUDNN, tensorRT and OpenCL.

## Product Details

As the vital component of the 4th industrial revolution, the reliance on AI as well as its applicability is increasing exponentially. However, the actual adoption of AI has been slow due to the exorbitant processing power and cost required to run AI.

SoyNet has taken an innovative approach to solve the bottleneck in AI implementation. It stripped away AI training engine (once training has taken place) leaving only AI inference engine. The result is a much lighter AI accelerator that boots up quickly and takes less memory.

SoyNet Mi-Device is a multi-intelligence device to take body temperature and face recognition.

## TESTWORKS

+82-2-423-5178

www.testworks.co.kr/

johnnchoi@testworks.co.kr

testworks-inc

## Company Introduction

Testworks is a social enterprise company in Seoul, Korea. We create innovative solutions in AI data and software testing fields while providing an inclusive employment model for socially disadvantaged people. Our technical excellence ranges from AI data processing automation to manual software testing and review. We are recognized as the best-in-class data processing company for building quality datasets used for AI training and verification.

We provide best-in-class services with automated object recognition technology more advanced by the large-scale datasets.

- Short-term  
Save time and cost with human-powered platforms and automated AI data annotation technologies
- Automation  
Use AI-powered automated solution advanced by self-generating dataset and AI model
- Large-scale  
Generate a large scale dataset with various project experience and know-how
- High-quality  
Deliver accuracy data with our fully managed A-to-Z data annotation service

## Product Details

## blackolive

For better artificial intelligence services, blackolive is the optimal solution for efficient AI data processing & management with advanced auto-labeling and powerful data quality control.

## Features

- > Project Management Dashboard The most important aspect of data processing is managing processed data. Users can process data using blackolive while administrators can monitor project activity on the dashboard.
- > User-Specific Project Environment  
Users can go to the project screen from the dashboard to check their progress at a glance. Workers can also check the review status upon demand, allowing them to focus on the project itself
- > Intuitive User and project management  
The administrator plays a vital role in ensuring a smooth data processing experience. The administrator can use the dashboard to manage worker and projects, and activate the key function of the dashboard, namely model automation.
- > Statistics Dashboard  
The administrator can use the dashboard to view progress by project or worker at a glance. The statistics dashboard offers graphs regarding data on workers, projects and other information including gender and age.
- > Easy Task Creation The administrator can upload large amounts of data in advance and additional descriptors as Microsoft Excel files. Multiple tasks can be created using the same template.
- > Communicating Space for Users and Administrators  
Users and administrators can communicate with each other with the bulletin on the dashboard. With the bulletin, users can view new notices, while administrators can see any issues posted by users.

## aiworks

Our efficient crowd-sourcing based data collection and labeling platform and well-trained staff and systematic process will help you build highly accurate and quality datasets to accelerate machine learning.

We deliver high quality data through the platform and workforce. Our fully managed services include computer vision, natural language processing, audio transcription, and more data processing, by pre-trained data annotators on our data annotation platform.

VideoMonster is an online short-form videomaking service provider, aiming to make its clients' videomaking experiences 'affordable and efficient.'

Short-form video production has largely been in the realm of design experts. But VideoMonster changes this dynamics. With its solution, anyone can create professional videos with simple drag and drops.

With the next project coming this Q4, an automated AI-Based long-form video editing tool, VideoMonster strives to become Asia's No.1 video tech company, encompassing all types of videos.

## Product Details

### VideoMonster

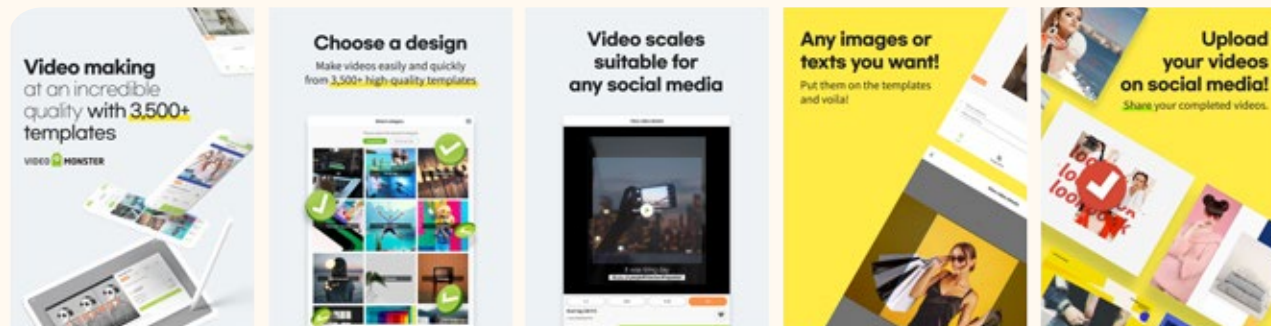

Make eye-catching video ads easily and grab people's attention effectively.

Creating studio-quality video ads can be expensive and time-consuming. But it doesn't need to be with VideoMonster.

VideoMonster is a Template-based Short-form Videomaking Solution (Web/App/SaaS). Supported by the following features, anyone can make captivating short-form videos without any backgrounds in video design or production.

#### [Key Features]

- 1) Video templates ensure easy videomaking without complex editing steps.
- 2) 3600+ templates ensure flexible and good-quality videomaking compared to price.
- 3) Cloud-based rendering tech (patented) ensures a fast completion (3mins).
- 4) Free stock photo/video library allows for TV commercial-level output.

# WATA Inc.

+82-31-707-3717

<https://watanow.com>

[peter.ceo@watanow.com](mailto:peter.ceo@watanow.com)

## Company Introduction

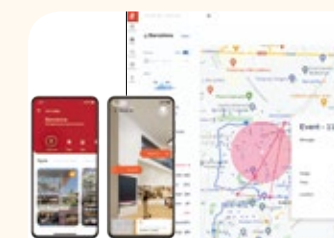

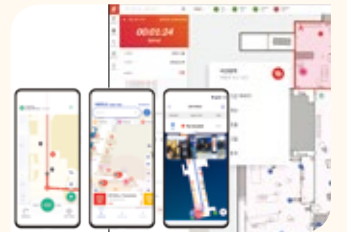

WATA was established in 2019 with the objective of adding value to our daily lives by transforming physical space into Smart Space where people and objects interact through WATA's spatial awareness technology.

WATA provides AI Cloud Spatial Awareness Platform and various Smart Space Solutions, and through its services and solutions WATA contributes to creating people-centric spaces and building Smart City. With its distinguished technology, WATA has achieved meaningful results. WATA was selected as Official Provider of Indoor Location Guidance Services for 2020 Tokyo Olympic Games after having demonstrated its precise positioning accuracy at Tokyo Government PoC. In addition, WATA conducted Gartner Vendor Briefing and participated in CES 2021 in cooperation with Samsung C-Lab.

## Product Details

### Location Control and Monitoring Solution

WATA's Location Control and Monitoring Solution provides a variety of features which include checking real-time location of all visitors, tracking visitors, control and monitoring, sending emergency messages, etc. in addition to indoor space data collection tool that allows businesses without a map to introduce location information services in an easy and fast way.

### Smart City Solution

WATA's Smart City Solution is built on space data and sensor data collected from various WATA's Solutions to provide data and location information services, which contribute to improving the quality and wellbeing of citizens. The integrated data dashboard provides key smart city statistics providing useful insights for creating a better smart city life.

### Smart Factory Solution

WATA's Smart Factory Solution provides various features including real-time monitoring of workers and factory environment (e.g. temperature, humidity, nitrogen dioxide), accident detection, smart asset management, etc. to create a safe work environment.

### Smart Retail Solution

WATA's Smart Retail Solution enables businesses to provide hyper-personalized services by providing customer insights derived from data such as customer movement path, stay duration, product preference and visit frequency. It also helps businesses to effectively manage multiple stores and customers, and provide hyper-proximity marketing.
