Hangyohologram is a high-tech company producing various products and applications based on volume hologram technology. With the infrastructure for mass production of volume holograms and holographic optical elements (HOE), Hangyohologram is leading the 4th industrial revolution in the world with superior quality and technology development.

Hangyohologram's two key technologies are volume hologram master production technology and volume hologram mass production technology. Based on these technologies, we are working to commercialize volume hologram products in various business fields such as automobile,

electronic/display, security, culture/entertainment, etc. Our main products are Image hologram and Holographic Optical Element(H.O.E). Image hologram can be utilized as a design elements, and H.O.E can be used in 3D display devices such as AR HUDs and HMDs.
