

## USPs

- ▶ Flexible Business Model
- ▶ Rapid Service Innovation
- ▶ Resources Optimization
- ▶ Shorten the Path to Business Value

## Benefits

- ▶ Cloud Native Foundation
- ▶ High Scalability and Performance
- ▶ Simplified Network Operational Model
- ▶ Extreme Growth Enabler
- ▶ Speed to Market
- ▶ Increase Network Profitability

## Innovating the Network

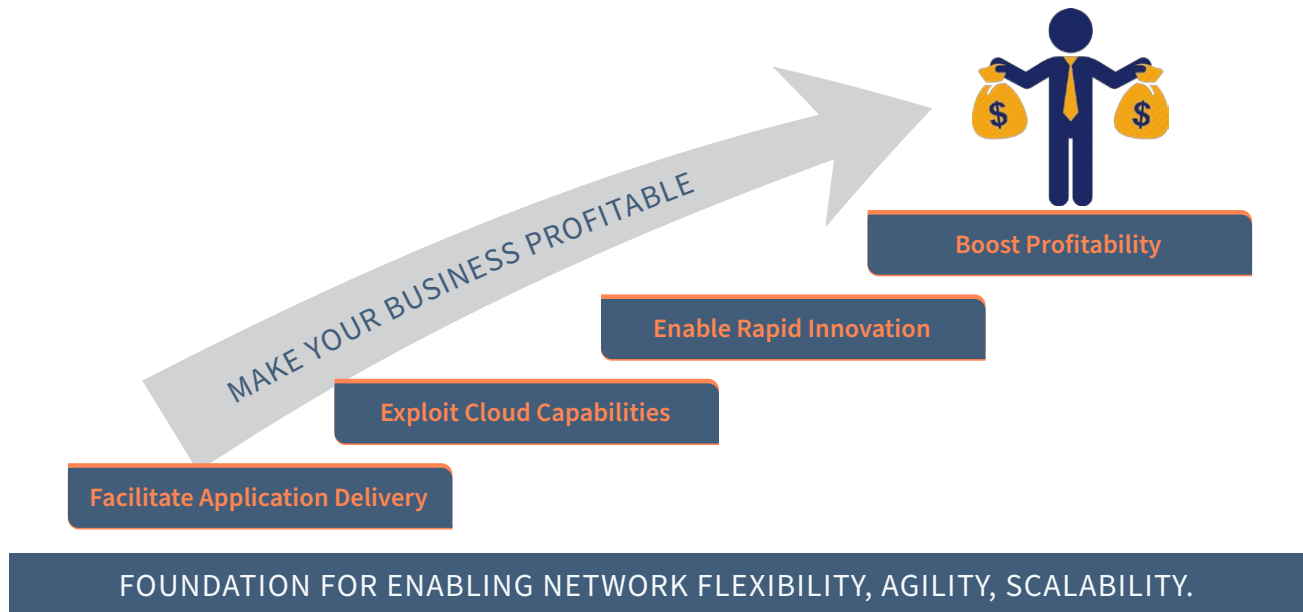

6WINDCloud is an innovative disaggregated networking software solution that embraces the Cloud Native Architecture to enable extreme network growth and simplify the network's operational model.

6WINDCloud aims at helping network application builders adopt an innovative way to address the challenges brought on by the 5G market.

6WIND's solution for disaggregated network applications enables performance and on demand scalability while optimizing resource allocation and increasing network profitability.

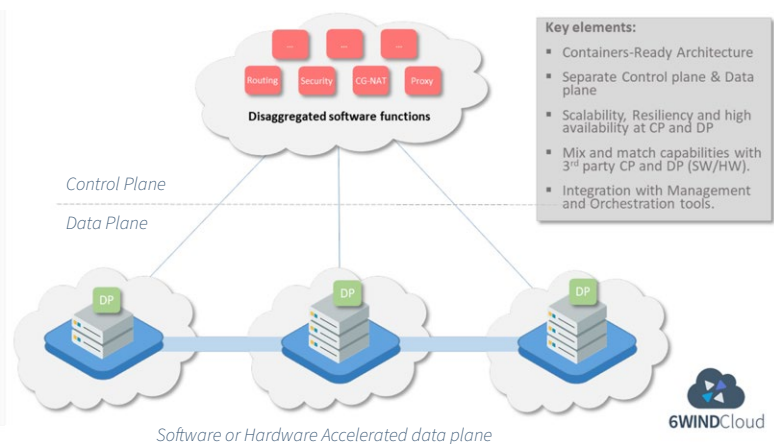

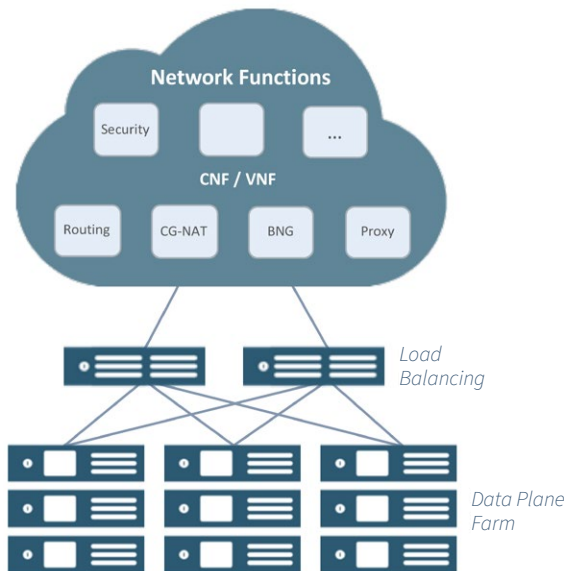

## Why the Cloud Native-Approach?

## Momentum for New Innovative Services

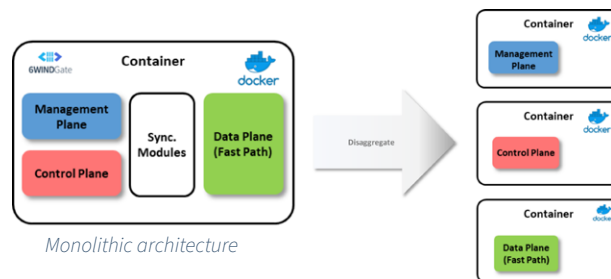

- ▶ The way for building disruptive solutions for service provider's markets
- ▶ Based on solid networking knowledge built over 15 years of experience
- ▶ Distributive, Scalable, Flexible and agile networking approach designed to meet current and future challenges
- ▶ Increases network profitability by optimizing network resources and lowering TCO

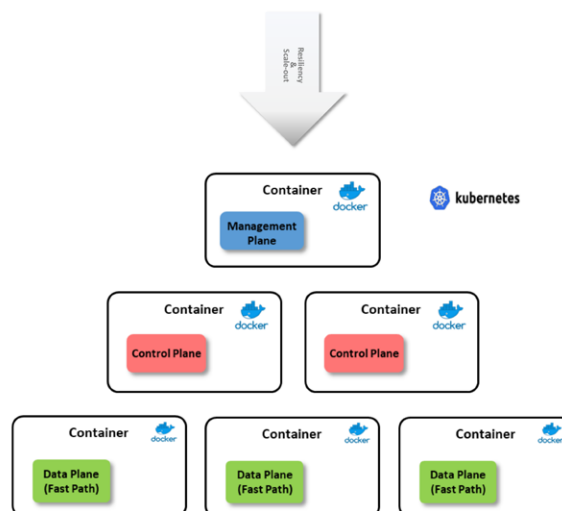

## Disaggregate & Distribute

- ▶ Flexible network application model
- ▶ Create a single networking application instance from a distributed data plane containers
- ▶ Microservice based network functions
- ▶ Scalability at management plane, control plane and data plane levels

## Disaggregation Approach

- ▶ **Simplified Operations:**  
Centralized management
- ▶ **High Resiliency:**  
Redundant control plane
- ▶ **Extreme Scalability:**  
Distributed data plane

Disaggregated and distributed architecture
