Digital Banking Platform

# PS-DBP

ProgressSoft's Digital Banking Platform is a central omnichannel platform that orchestrates retail and corporate customer interactions across web and mobile touchpoints; from digital customer onboarding and front-office banking services to intuitive and personalized experiences.

The all-in-one platform provides banks with the ability to aggregate financial services, unify customer data, and become a part of their customer's financial and non-financial life through intelligent automations and predictive analytics.

## Seamless Integrations

PS-DBP seamlessly connects with back-end and third-party systems to enable process, channel and solution integrations as well as provide the ability to offer non-financial services with ecosystem partners such as loyalty schemes. In addition, it provides centralized management over corporate and retail accounts, as well as unifies customer data.

## Digital Customer Onboarding

PS-DBP comprises an embedded electronic know your customer/business module for fully remote and digital customer onboarding. It provides real-time identity verification and risk scoring that is compliant with all necessary identification regulatory requirements with highly customizable features according to each bank's needs.

## Frictionless Personal Banking

PS-DBP provides retail customers with a centralized, user-friendly and intelligent platform for:

- Cards Management
- Accounts Management
- Bill Payments
- Money Transfers
- Beneficiary Management
- Notifications Management
- Personal Financial Management
- Checks Management
- Dashboards and Reports

## Reinvented Corporate Banking

PS-DBP also provides corporate customers with a secure, omnichannel platform for:

- Trade Finance
- Payments
- Cash and Liquidity Management
- Loans Management
- Fixed Deposits
- Bill Payments
- Checks Management
- Cards Management
- Accounts Management
- Data Analytics and Dashboard

## Highly Secure Platform

PS-DBP integrates with Anti-Money Laundering and Combating the Financing of Terrorism (AML/CFT) systems and utilizes artificial intelligence to detect risks associated with critical business operations. It automatically collects and analyzes data associated with requests, detects any anomalies, and then approves, rejects, or blocks the transaction and alerts the financial institution accordingly.

## Benefits

PS-DBP provides banks with massive benefits including:

- Serving retail and corporate customer demands for accessible payments and personalized services
- Allowing rapid orchestration of new value-added services by the bank to stay ahead of competition
- Offering a 24/7 platform for customers to interact and transact
- Enhancing productivity, management and oversight of retail and corporate accounts
- Attracting new customers and massively reducing overhead costs
- Reducing manual errors and guaranteeing full regulatory compliance
