ABOUT

"In 2010, I created ITD to improve the everyday work of many of our operator friends. I wanted to facilitate the management of their processes and their infrastructure. This ambition remains unchanged, and my commitment is still there."

JEROME PERRET, CEO

BOOST YOUR PRODUCTIVITY

Your teams will complete their projects in record time, by implementing automated processes, with clearly defined responsibilities and tasks. Easily detect and resolve any roadblocks.

INCREASE VISIBILITY AND CONTROL

Do you know how many sites you manage and their state of working order? With ClickOnSite, all your up-to-date information is available on a single platform and visible in real-time.

CUT COSTS DUE TO ERRORS

Financial losses due to inaccurate or incomplete information, or insufficient control, can be significant when managing thousands of sites spread over a large expanse of territory. Control your costs with ClickOnSite.

WHY CLICKONSITE?

From the day of its market introduction, ClickOnSite has set the standard in network information systems and today it is the system of choice for many of the world's largest telecommunications providers, equipment vendors and contractors.

With ongoing research and development, ClickOnSite is constantly at the forefront of its field, guided by a mix of industry feedback, technology innovation and vision (i.e.: digital twin, 360° viewer, etc.).

The ITD team applies its experience to create solutions that meet the challenges facing the telecommunication community. ITD's innovative solutions are driven by the industry's most experienced organizations such as MTN, Orange, Tele2, etc.

YOUR CHALLENGE:
REMAIN PROFITABLE AND COMPETITIVE

The biggest challenge for a telecommunication provider in today's market is to remain profitable and competitive.

By integrating tasks and ecosystem management within a single, web-based solution, ClickOnSite helps telecommunication providers to move faster and achieve a greater level of control. This unique information system delivers unprecedented, real-time visibility into the trade-offs involved in key business decisions allowing technical and business executives to make the management of their network simple and efficient.

A SINGLE POINT OF REFERENCE TO ACCESS ALL SITE INFORMATION

In just a few clicks, ClickOnSite gives you access to every document and all information related to any candidate and site. It covers the entire network lifecycle: from site search to project management to lease and asset management, etc.

ClickOnSite history keeps track of every change made to the status or details of a site. You can access this information to see the details of every change - what changed, when it changed, and who changed it.

INCREASE COLLABORATION

ClickOnSite helps to increase collaboration among the organization and eases the communication flow. It allows your process to require approval from a single or a group of reviewers to make sure critical information and tasks are recorded and completed correctly.

CONFIGURE CLICKONSITE TO YOUR NEEDS

ClickOnSite is a standalone application that can be configured according to your current or future needs:

- Lease management
- Supply chain management
- IFRS16 integration
- DAS & small cells
- Refueling

- 5G
- Fiber
- Billing
- ...

ENJOY A USER-FRIENDLY INTERFACE

Beyond the clarity of ClickOnSite, users enjoy accomplishing particular tasks in no time and learning about the application features by simple observation. This is the result of our optimization program that does not only improve navigation and design, but also limits the number of clicks to access the information, and focuses on wording quality to avoid misinterpretation and excessive thinking.

Also, like most of the products of its generation, ClickOnSite offers a multilingual environment supporting many languages using Latin script. It is already available in English, French, and Spanish.

ASSIGN ROLES AND ACCESS RIGHTS ACCORDING TO YOUR NEEDS

ClickOnSite provides a multi-level, role-based access control and security system that is administrator-configurable. Each user is assigned one or more roles, and each role is assigned one or more privileges that are permitted to users in that role. In the other words, you can give users as much or as little access as is necessary to accomplish their tasks. It ensures that the person connected to it only gets access to appropriate information.

Thus, once the role-based security framework is established for your department, the principal administrative actions are the granting and revoking of users into and out of roles via a dedicated and user-friendly interface.

IMPORT AND EXPORT ALL DATA EASILY

Moving from one software application to another can be both time-consuming and costly. We have designed our application with a full complement of import and export options to simplify the migration of data from your current system to ClickOnSite, making the whole process fast, efficient and relatively painless.

STATE OF THE ART TECHNOLOGIES

ClickOnSite is using the best technologies currently available. For the front end, we have chosen HTML5, Angular and Bootstrap to benefit from the capacities of modern browsers on PCs, tablets and mobile phones. For the back-end, Java 8, Spring, PostgreSQL/JSON or RESTful APIs provide us with a rich, flexible and solid technological base, and thus ensure the sustainability and interoperability of our developments.

LOWER YOUR INVESTMENTS

By the time you use ClickOnSite, you will realize some of the many benefits of using ClickOnSite core product, how it dramatically lowers your investments by reducing the cost associated with licensed software and its support.

WE THINK IN LONG TERM

Choosing ITD is the certainty of engaging with a long-term business partner. However, we rely on a software escrow service to satisfy client requests when they feel the need to migrate the risks of costly interruptions in the use of ClickOnSite.

WE ARE HERE FOR YOU

We provide proactive and reactive troubleshooting to help resolve environment or application-related issues. Service requests can be submitted directly via the support center. Our support staff responds under timelines agreed upon in your contract and service level agreement to ensure ongoing system performance and stability.

LATEST USE CASES

SITE ACCESS REQUESTS

Our telco & BPM expert has come up with a solution that enables OnTower/Cellnex (France) teams to **authorize site access automatically in nearly 50% of cases** if the relevant criteria are met (without anyone's involvement).

SELF-INSPECTION

In multiple countries, we face the difficulty of making sure that foundation rebars are in line with calculations and compliant with tower specifications. To combat this, we have created for Orange Mali a **self-inspection template in the ClickOnSite Mobile App**.

MINI AUDIT

The "cuckoo syndrome" is a major issue for TowerCos in certain countries. To avoid having to take too dramatic of measures, we proposed that Panasia in Myanmar carry out **mini audits on a regular basis** to have reliable sets of data and accurate inputs for later billings.

SMART LOCK INTEGRATION

Panasia wanted to trigger digital keys directly from ClickOnSite. Now, when a site access request is validated along with a ClickOnSite process, **it automatically generates a Sera4 digital key** to open a smart lock and allow physical access.
