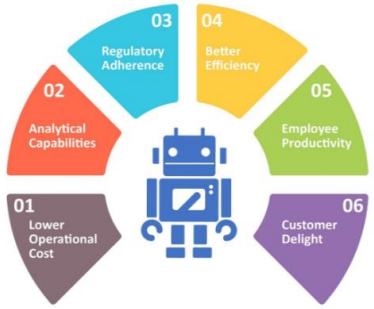
5. Promotion of the Dutch digital economy (ddd) and The Netherlands as an innovative and cybersecure country



NL DIGITAL HOUSE | NLMWC

Building a strong digital society together

Connect and create

Research and innovation are of great importance to our prosperity, well-being and productivity. Digital innovations are transforming the way we live and work. The Netherlands has a good starting position in the digital landscape, the infrastructure is world-class. In the future, we want to take maximum advantage of the opportunities created by digitization. To achieve this, the dutch digital delta network has been set up. This network is the meeting place for technological innovation. We join forces, share knowledge and create opportunities. We are the national platform for business, government and science, with the aim to connect and create.

connect and create

Vision and contribution

We face a number of major global societal challenges for which targeted cross-sectoral engagement in science, applied research and innovation is indispensable. These include themes such as energy transition and sustainability; agriculture, water and food; health and care; and security (including cyber, defence and water safety). Technological breakthroughs are very important for successfully tackling these societal challenges.

Human Capital Agenda

The Netherlands has a leading position in innovation with ICT globally speaking. This turbulent growth is accompanied by a great need for staff with the right ICT skills. Education is difficult to keep up with this demand of the labour market. Both companies in the ICT sector and beyond are running out of vacancies, and The Human Capital Agenda (HCA) is an action plan to meet the growing demand for ICT professionals.

How do we do that?

Actionline 1

Encouraging regional cooperation
