

.....

*Golf is the best sport,
but it takes practice
to hit good shots.*

.....

SMARTGOLF makes it simple.

On a golf course with clear skies and panoramic views, it takes practice to climb the green grass, hit great shots, and play golf with your friends.

To make swing practice a little easier and more convenient, scientific golf practice is required, and SMARTGOLF Club allows you to practice swing easily and accurately indoors.

Be the subject of your own practice.

A good coach can teach the golf swing with the fame and rich experience of his prime, but each person's physical characteristics are different, so you need to find a coach that is suitable for you.

Even with expensive coaching, you will eventually improve your swing only if you practice. Now that the swing principle of golf has been mathematically revealed, it is now possible to analyze and train more scientifically through SMARTGOLF.

Even if you swing by yourself, the app analyzes it, tells you what is the most wrong, and even coaches you on how to improve it. You can practice on your own by following this coaching from the app

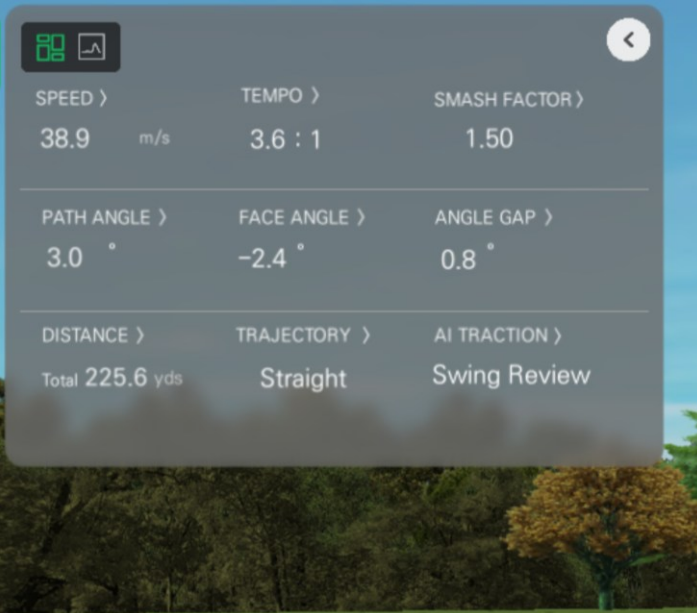

Scientific Analysis and Coaching

Golf is no longer just a symbol of the older affluent. Golf is the 1st sport that people in their 20s and 30s want to learn.

Golf practice that starts anew needs to be scientific and systematized for the digital generation. You can practice and improve your skills conveniently by yourself with automatic analysis and coaching in the app and system rather than the traditional experience-oriented coaching.

PERHAPS THE
BEST SWING IS
THE ONE YOU'VE
INTENDED,
UNDERSTOOD,
AND PRACTICED.

SMARTGOLF ELABORATES IT.

Existing swing analyzers and simulators only show data in the impact section or simulate the trajectory of the ball even at a price range of tens of thousands of dollars. Data at the moment of impact is important, but not enough.

To improve your swing, you need more information, not the result of a hit or miss. In particular, to improve the swing through the correlation of such information, it is necessary to understand the mechanism of the swing..

A.I ALGORITHM

SMARTGOLF is analyzing the entire swing section by applying a scientific algorithm. In addition, AI swing posture analysis is performed through machine learning, and SMARTGOLF's algorithm provides indications and solutions for the most problematic indicators in this swing.

SMART
GOLF

ONLY SCIENCE ADVANCES THE
WORLD.

3D REPRESENTATION AND ANALYSIS

- The avatar swing of the app that imitates the free movement of the club at the same time
- The entire swing area and impact section are expressed and reproduced in 3D.
- Individual and comprehensive analysis display with 3D manner along the time axis by machine learning

BE THE SUBJECT OF YOUR OWN TRAINING.

No matter how good teachers and training methods are, your body is yours and your golf swing is also yours. Therefore, swing analysis made after a light swing, and it is an important tool and method for self-learning to know whether the swing has been improved or not. Sometimes learning from a good teacher, but always swinging by yourself so that you can practice, changing the form yourself according to the coaching results of the App and comparing them is a new paradigm of golf practice.

Now, get away from the anxious swing practice of whether this is right, and become the subject of golf swing training yourself.

IMPROVING YOUR SKILLS with SMARTGOLF

SMARTGOLF mathematically elucidates the golf swing algorithm so that anyone can clearly understand it. Scientific swing analysis is performed by analyzing 3 circular motions and 1 linear motion, and also scientifically analyzing your swing problems through the camera. With full explanations of these physical algorithms and video tutorials for each part to follow, you can easily improve your golfing skills.

Improve your golf skills by understanding the fundamental interpretation of problems related to swing distance and direction as well as swing repetition with SMARTGOLF.

CUSTOM GOLF LESSONS

It provides a slightly more lenient golf swing error range for beginners and more sophisticated swing data for professionals.

SMARTGOLF provide golf lessons that allow you to learn step by step from basic movements based on physical principles according to your golf skills.

.....

SMARTGOLF AI ANALYZER

The SMARTGOLF AI Analyzer has a short club length for indoor practice, but the 30cm strap on the head and LEDs allow for correct addressing and impact.

Silicone on the head and silicone on the grip are designed to help with safety and prevent slipping even without gloves. Swings with this club are automatically recorded and analyzed using machine learning techniques to lead to scientific coaching.

**SMART
GOLF**

.....

GOLF IS SCIENCE.

GOLF PRACTICE ANYWHERE

- Continuous practice is needed for the desired shot in a great field.
- Although the length is short, SMARTGOLF, which is complemented by a 30cm strap, does not lose its form even if you swing anywhere.
- Swing at home, in the yard, in the warehouse, or in the indoor hallway, if you have a little safe distance.

BE THE SUBJECT OF YOUR OWN SUCCESS.

You must understand scientific principles in order to practice on your own rather than relying solely on the experiences of others. You can make a swing according to your body by understanding it first and practicing steadily. However, for a swing with continuous consistency, correct analysis and trend statistics of accumulated analysis results are required. SMARTGOLF helps self-learning through the App.

Create your own golf swing with the AI algorithm learning method developed by SMARTGOLF. When interpretation is difficult, you can get help from a good coach provided by the App. After receiving coaching, practice on your own again and become the subject of success.
