Certificate of Ownership

Transformation with NFT begins

The world is changing rapidly and brands that adapt to this change continue to be the pioneers of change. As Cheyny, we are carrying out studies in the field of Blockchain so that you can take part in this change.

We are very happy to present you our project where your customers can safely store the NFT certificates of your valuable products and protect their value.

Now is the time to say hello to the future together!

- **Original idea, original service...**

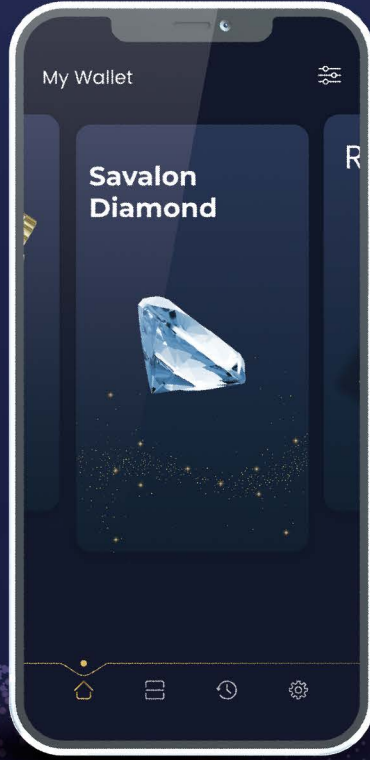

Your certificates that you convert to NFT maximize the trust in authenticity for your customers; because NFT certificates can be tracked for a lifetime and are extremely secure against any change, thanks to its decentralized system.

- **Customer experience is much more valuable now...**

Your customers no longer have to keep their certificates in a physical area in order to prove that the valuables they buy from you belong to them and protect their value, so they do not have to live in fear of losing them.

You can present them to your customers as NFTs with Cheyny. Therefore your customers can keep their certificates in their digital wallets forever and access them whenever they want.

A unique
