

## We care about the success of your employee app

That's why we support our customers not only before and during the rollout, but also way after the go-live of the app. We are always by your side with extensive expertise as your reliable partner.

## The employee app for your deskless workforce

# 5 reasons why communication experts choose Flip

## Simple

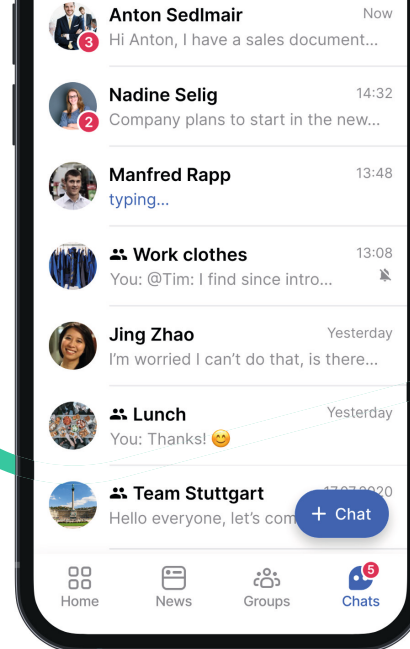

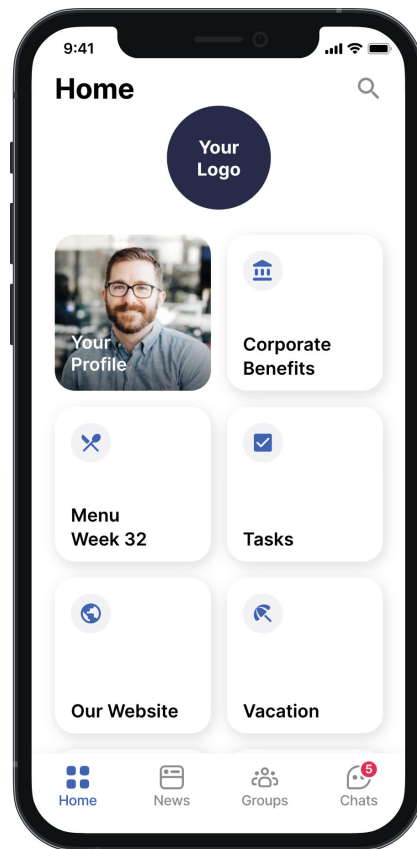

For the first time, you can quickly and simply distribute information and content to your employees with your own employee app – targeted and in real-time. Using the app is intuitive and requires no training.

## Individual

Your employee app in your own corporate design not only creates trust within your workforce but also significantly strengthens identification with your company.

## Inclusive

Your app enables you to reach and connect all employees, no matter where they are or what language they speak. This is how you strengthen the sense of belonging, create connectivity, and build a unique feedback culture.

## Secure

Your employee app offers the highest protection level for your data and fulfills all information security standards. Your data is encrypted in compliance with the GDPR and is hosted exclusively on German servers certified to ISO 27001.

## Offline-capable

Your app is the only one that can be used anywhere and at any time – with or without data reception. So even employees on the sales floor or in the warehouse stay informed.
