SIGMA  
GROUP

# Global Voice Carrier

Sigma Telecom cooperates with the largest 700 telecom operators around the world as one of the largest international voice carriers. Sigma Telecom provides international services to corporate companies in 170 countries with digital services that best meet their communication needs.

Sigma Telecom carries more than 500 million minutes of voice traffic per year with most up-to-date communication infrastructure, 99% network operation standard, high bandwidth capacity and end-to-end services. Monitoring both SMS and VoIP traffic 24/7, Sigma Telecom responds immediately to fraudulent activities with high-level customer service and technical support teams.

## INTERNET SERVICE

*Provider* IN TURKEY

Broadband internet access to its individual, corporate and wholesale customers.

# SMS

## to Reach Billions of People

Sigma Telecom offers up-to-date and highly secure, high-level SMS technologies including A2P and OTP services that work over the internet with artificial intelligence for your usage. We transmit your messages instantly to all over the world thanks to our cooperation with global operators.

Managing your SMS activities with our high-speed and reliable servers is easier than ever with a single panel. You can send personalized messages to your target audience, connections or customers with Sigma Telecom SMS services to help you to raise your brand prestige, expand your customer base and increase your brand awareness and sales with the advantages of bulk SMS. You can also send personal messages specific to each of your customers, only about topics relevant to them.

## Prominent Fixed Line Operator

### in Turkey

Sigma Telecom benefits from the advantages of the IVR system, that can be scheduled for a future date to be operated automatically, alongside cloud PBX to provide solutions tailored for the needs of enterprises.

Fixed telephone lines as well as DID numbers provided by Sigma Telecom can be integrated into the existing telephone infrastructure of enterprises with the structure that is compatible with cloud PBX and also with both analog and IP telephones. Customers can use both their existing numbers and new numbers that they can specifically create to benefit from country-specific services at country-oriented competitive prices.
