

Legally-Compliant Digital Signatures (eIDAS compliant)

Simple, Easy and Legally- Compliant Digital Signatures

The Complete Digital Signature Solution for the Acceleration of Business Processes

The affirmation of a new economic and social environment determined the need to convert business processes in a more agile and fast way.

For this reason, tools were developed to adapt to this paradigm shift, taking advantage of the new technologies that are constantly affirming every day.

To this end, the digital signature gave a great boost to business organization's innovation and digital transformation, optimizing both the economic costs and the security and trust needs.

In addition, thanks to digitization, business resources related to paperwork such as storage, printing, transport and documents destruction disappear, favouring both the economy of the company and the environmental sustainability.

Digital Signatures: The Drive for Your Organization

neBULaSIGN allows organizations to save time and energy in document management, offering the opportunity to streamline and automate processes thanks to workflows for document approval.

Different company users, both employees and third parties, can easily and reliably sign documents thanks to joint or bulk signature options.

The result will be a smooth organization of corporate procedures, added to greater security during the signature processes, protected by encryption to guarantee privacy.

The Best Security for your Processes

The digital context has also to comply with regulations issued by national and European institutions to guarantee cybersecurity, control and digital identities' management. neBULaSIGN is updated according to the new protocols, offering a solution that is aligned with all the regulations in force in the European Community such as GDPR and eIDAS.

A Wide Range of Signature Options and Legal Compliance

neBULaSIGN offers different digital signature options to sign documents and approve secured transactions.

- By digital certificate for the organization.
- By digital certificate or handwritten signature with biometric control for employees or clients.
- No need of installing certificates on the device.
- Signature consent with Password.
- Multiple signatures by OTP.
- Block signing.
- Signing option for external users.
- Handwritten signatures.
- Handwritten electronic signatures (digitized signature) integrated into PDF documents.
- Digital signatures through the user's digital certificates, stored centrally in neBULaCERT system.
- Automatic signature in PDF files.
- Visible signature of the external agent.

Easy and Simple User Experience

neBULaSIGN offers many customization options, shaping a user experience which is easy and accessible thanks to design solutions that guide and direct the users in managing their workflows.
