

The End-To-End Solution for Claims management, from Customer to Insurance Companies

Our solution enables easy and streamlined management of insurance claims and experts interventions from disaster to indemnity.

Mobile

Fast &
Simple

Secure

- Unique Insurance Claim Management
- Data Protection
- Photo and Video proofs
- Mobile Solution
- Realtime Record Tracking
- Efficiency and Time Saving
- Multi-OS and Multi-Devices

No more time wasted with endless paperworks and phone calls. With mobyClaims you can easily manage your insurance policy, review your cover information, check your claims history and the status of current claims.

The information captured on the mobile application is electronically recorded and then sent back to mobyClaims platform in real-time, where it can be viewed, treated and used by your account manager for immediate action or any needed escalation to an expert, before sending professionals for the repairs or any due indemnity .

FEATURES

ADVANTAGES

Mobile application

- Multi-OS
- Online/Offline mode
- Alerts and Messages
- Detailed Claims / Reports
- Expert / Calendar
- Picture / Video / Report Geolocation

Rapid Intervention

- Rebuild the feeling that you really take care of your customer
- First hours after a sinister are always crucial.
- Avoid extra damages and costs

Schedule and Dispatch

For the insurance Company :

- Daily, Weekly or Monthly view of all expert' schedule
- Detailed claim reports

For the Customer

- Real-Time alerts & interventions notification

Administration

- Customer Profile Management
- Insurance Policies and claim management synchronization
- Instant access to all Compiled data
- Granular rights management.
- Go Paperless!
- Keep your customer updated and satisfied

Integration

- On demand integration (in-out) with systems APIs

No more weighty and disseminated files to search for, a smartphone or tablet is enough to manage everything. Your customers can search their policies information, company contact details and fill in the claim form with information you need : observations, picture, video, time, fact description, damaged rooms, goods and details etc.

No more waiting to get additional information/data back if the claim is incomplete. A request for additional information can be sent and received through the application messaging system.

Create your expert visit schedule. See all sites of your clients on the map and organize the day of your expert according to the places of interventions in the most efficient manner possible.

Thanks to the calendar your expert have an overview of all their upcoming visit.

To deal with the unexpected events, send them traffic, weather and other alerts from APIs of your choice.

Our unique platform will, after end-user approval, attach all accessible IoT data to the claim, permission can be given for all registered policies, single insurance policy or a specific claim.

All the features are designed to be interfaceable and can communicate with your existing APIs (ERP, CRM, HR...).

Our solution enables customer of insurance companies to take the stress out of managing their policies, submitting claims and track their progress any time by sign up for messages and alerts.

By the use of the phone's camera to show damage to their home and belongings, mobyClaims will ensure you have what you need as soon as they submit a claim for rapid actions and case treatment.
