

YOUR LANDS AT YOUR FINGERTIPS

A mobile application
connecting farmers with
agronomists

Who we are?

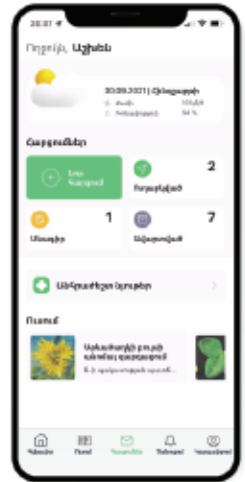

- Garoon Tech develops a digital platform for professional agricultural consultancy - a mobile application connecting farmers (*as well as greenhouse owners and indoor plant lovers*) with agronomists. The concept is to receive or provide a remote visual analysis for the detection of plants' diseases and deficiency symptoms.
- The goal is to equip gardeners with affordable yet reliable access to expert advice on what types and amounts of fertilizers (*both natural and chemical*) are needed to overcome the reported problem. The agronomists, on the other hand, are able to earn money remotely via this platform. The product is aimed to solve the lack of communication between gardeners and industry specialists, overcoming the existing logistical problems and beating the current guesswork in agriculture.

The project acts on several UN Sustainable Development Goals (SDGs)

What's next?

- Alongside serving as an independent mobile application, Garoon's solution is also ideal for being integrated into a large spectrum of hardware and software-based smart agricultural solutions.
- Like each elevator has a built-in Emergency Call button, each smart agricultural solution will soon have the Garoon module for receiving a distant precision-based consultancy.
- We are open to cooperating and making the agritech solutions even more attractive.

The ultimate goal of Garoon Tech is to automate the functionalities of the application through machine learning and computer vision algorithms, thereby making the consultancy even more affordable
