

Rapid Industrial IoT Solution Development Platform

Enables device connectivity, data processing and management, application integration, security, access control, monitoring, alarm management, digital twin and integration with enterprise applications

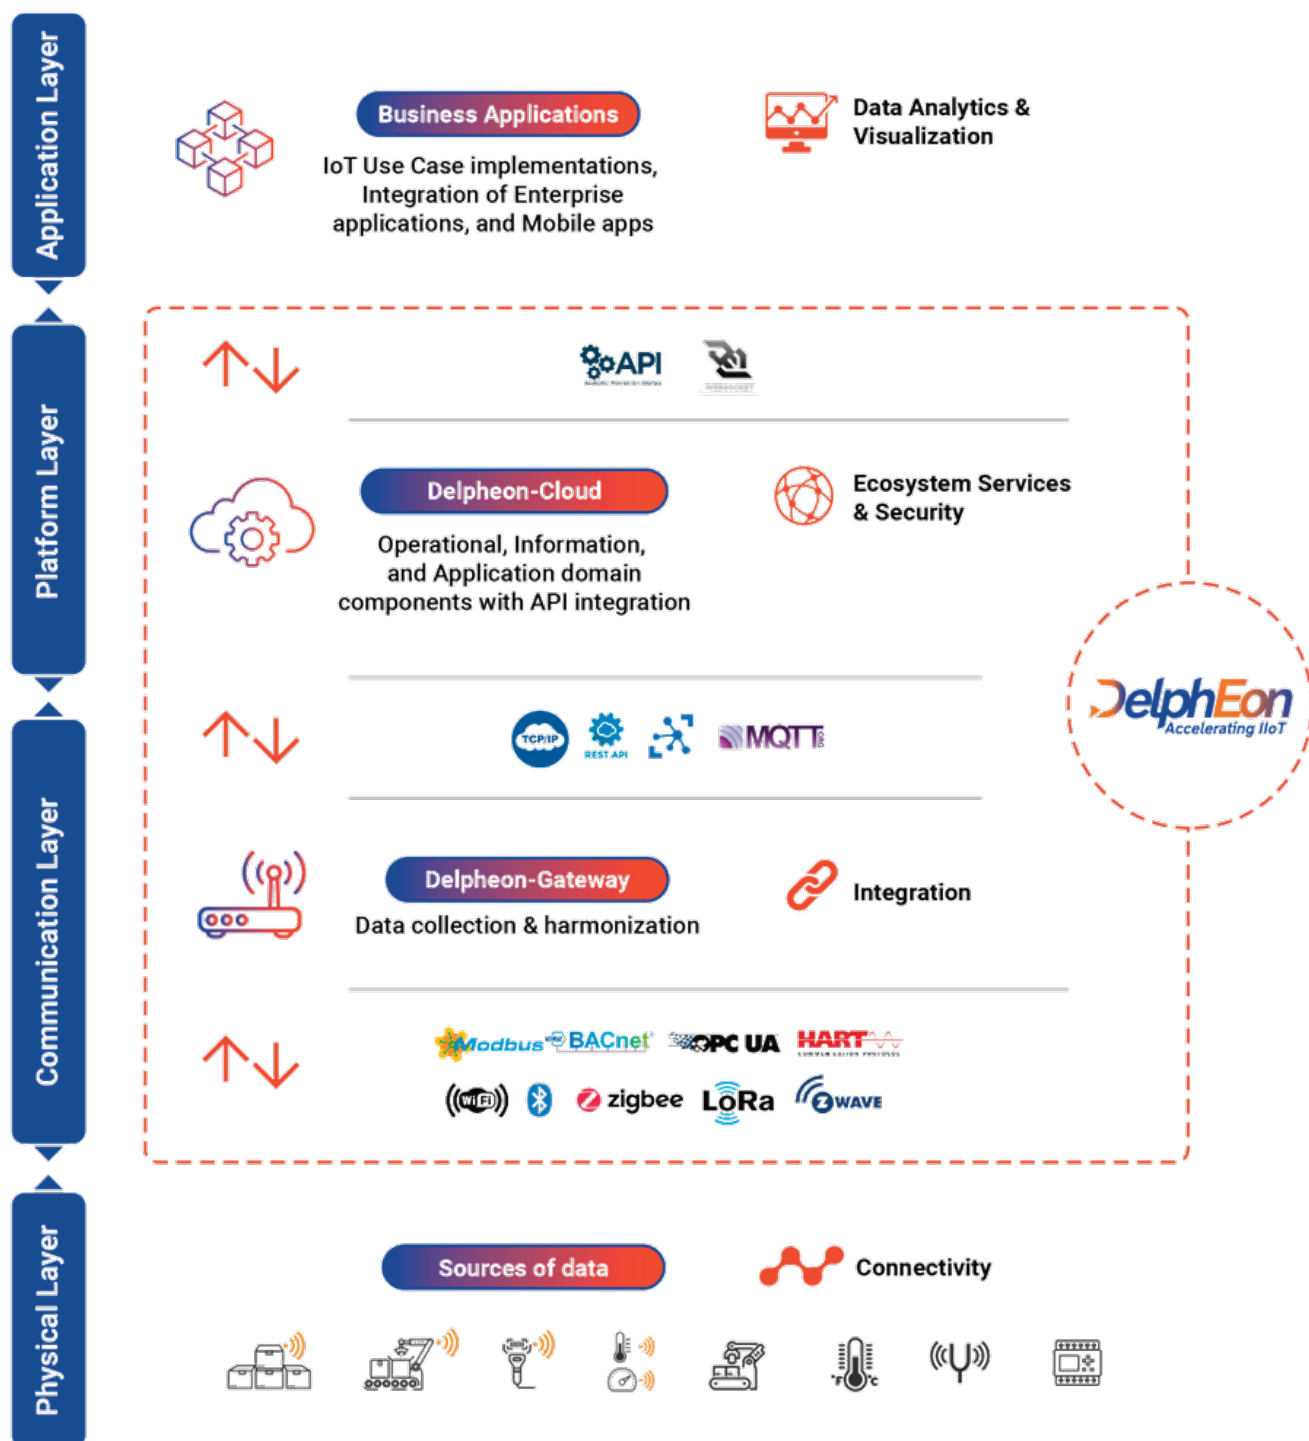

Delpheon deployment in a factory

Start your Industrial IoT journey using Delpheon with minimal investment & time

Components of Delpheon

Highly configurable platform

- Easy Integration of sensors, devices and gateways
- Application specific Hierarchy management
- Custom Digital twin for every deployment
- KPIs definition and generation
- Alarm definition, detection and handling
- User profile management

IIoT application development made easy

- Application can focus on dashboards and reports
- Platform takes care of data collection, storage, business logic and API interface
- Multiple Application deployment on the same platform
- Deployment on Azure or AWS or on-premise server

Security & Scalability

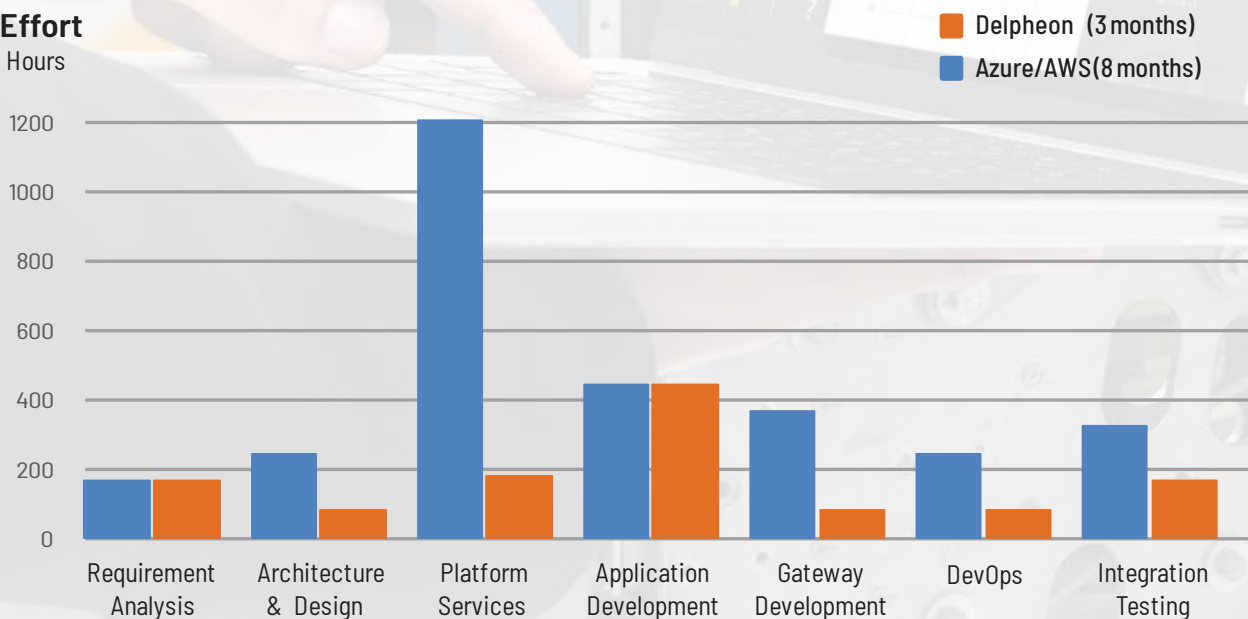

- Multi-level-security: Authentication & Authorization
- End-to-end encryption of data
- Multi-tenancy for different applications with each instance supports up to 2M data samples per day

Extensibility

- Application (cloud/ mobile) integration using platform APIs
- Integration of existing enterprise IT/ ERP systems and AI & ML engines
- Upgradable to meet Industry 4.0 requirements

Solution Development - Delpheon Vs AWS/Azure

Effort
Hours

Using Delpheon Effort/Cost is lowered by 70%

Use Case - Powered by Delpheon

Equipment Monitoring

Connected Factory

Smart City

Utilities

BMS

Partnership programs in building value-added products on Delpheon are available. For more details contact us.
